Dynamic Pricing Of General Insurance In A Competitive Market:

Dynamic Pricing of General Insurance in a Competitive Market Paul Emms, 2007 A model for general insurance pricing is developed which represents a stochastic generalisation of the discrete model proposed by Taylor 1968 This model determines the insurance premium based both on the breakeven premium and the competing premiums offered by the rest of the insurance market The optimal premium is determined using stochastic optimal control theory for two objective functions in order to examine how the optimal premium strategy changes with the insurer's objective Each of these problems can be formulated in terms of a multi dimensional Bellman equation In the first problem the optimal insurance premium is calculated when the insurer maximises its expected terminal wealth In the second the premium is found if the insurer maximises the expected total discounted utility of wealth where the utility function is nonlinear in the wealth The solution to both these problems is built up from simpler optimisation problems For the terminal wealth problem with constant loss ratio the optimal premium strategy can be found analytically For the total wealth problem the optimal relative premium is found to increase with the insurer's risk aversion which leads to reduced market exposure and lower overall wealth generation

Mathematical Control Theory and Finance Andrey Sarychev, Albert Shiryaev, Manuel Guerra, Maria do Rosário Grossinho, 2009-03-31 Control theory provides a large set of theoretical and computational tools with applications in a wide range of fields running from pure branches of mathematics like geometry to more applied areas where the objective is to find solutions to real life problems as is the case in robotics control of industrial processes or finance The high tech character of modern business has increased the need for advanced methods These rely heavily on mathematical techniques and seem indispensable for competitiveness of modern enterprises It became essential for the financial analyst to possess a high level of mathematical skills Conversely the complex challenges posed by the problems and models relevant to finance have for a long time been an important source of new research topics for mathematicians The use of techniques from stochastic optimal control constitutes a well established and important branch of mathematical finance Up to now other branches of control theory have found comparatively less application in financial problems To some extent deterministic and stochastic control theories developed as different branches of mathematics However there are many points of contact between them and in recent years the exchange of ideas between these fields has intensified Some concepts from stochastic calculus e.g. rough paths have drawn the attention of the deterministic control theory community Also some ideas and tools usual in deterministic control e.g. geometric algebraic or functional analytic methods can be successfully applied to stochastic control

Law School,1999 **Hospital Costs and Health Insurance** Martin S. Feldstein,1981 The cost of hospital care has grown so rapidly in the past thirty years that it is threatening to bend our economy completely out of shape A hospital bed that cost 16 per day in 1950 cost 214 per day by 1978 an increase of

more than 1200 per cent What is the cause of this fantastic inflation which has been far higher than for any other major good or service In this pathbreaking book Martin Feldstein sets forth a novel explanation provides empirical support for it and suggests some remedies for the problem Feldstein demonstrates a complex relationship between the growing sophistication of hospital care physician and patient demand third party insurance payments and the tax treatment of insurance premiums This last he argues is the key to the problem in that government policies stimulate the purchase of excessive insurance by a tax deduction and exclusion that cost the Treasury about 10 billion a year To mitigate the increasingly severe burden of hospital costs Feldstein recommends that this preferential tax treatment be ended In its place he proposes a new national health insurance plan that would give incentives to physicians and their patients to economize on costs and at the same time provide adequate coverage for major illnesses
