

Introduction

As of September 2014, 864 million people used Facebook every day to connect with others (Facebook, 2014).

Rejection sensitivity is the tendency to readily expect, readily perceive, and overreact to social rejection (Downey & Feldman, 1998).

Rejection sensitivity has a close link with internalizing symptoms, including higher levels of depressive symptoms, anxious symptoms, and lower social competence (Morton, Hare, & Allen, 2008).

People with social anxiety prefer to communicate online over face-to-face communication (Caplan, 2007), suggesting that this may be beneficial for such individuals.

Making more friends online is linked to better psychological well-being for less socially accepted young adults (Szewdo, Mikami, & Allen, 2012).

It is unclear how different aspects of online relationships and reasons for using online communication may predict relative changes in rejection sensitivity.

Hypotheses

Making more Facebook friends will predict a relative decrease in rejection sensitivity.

Making more Facebook wall posts from friends will predict a relative decrease in rejection sensitivity.

Going online to socialize when down or anxious will predict a relative decrease in rejection sensitivity.

Method

Participants (N=88)

Participants were drawn from a larger longitudinal study of adolescent social development (N=184). Participants represented those who had a Facebook page at the time of the study and consented for it to be coded for research purposes.

Gender: 75 males, 14 females

Race/Ethnicity: 64% Caucasian, 27% African American, 11% Mixed/Other

Family income: median = \$40,000–\$50,000

Assessed at ages 14, 21, 25

Measures

Number of Facebook friends (Youth Age 21)—The total number of friends as coded from participants' Facebook profiles.

Number of wall posts (Youth Age 21)—The total number of wall posts as coded from participants' Facebook profiles.

"I have socialized online to make myself feel better when down or anxious" (Youth Age 21)—Item taken from a questionnaire about online behavior, rated on a 1–4 scale with higher scores indicating greater agreement with the statement.

Rejection Sensitivity Questionnaire (Youth Age 14, 21) +Assessed with questions regarding how concerned or anxious participants would be in various situations and how they would expect others to respond. Sample item: "You ask your friend to do you a big favor."

Results

Analyses first considered intercorrelations between variables of interest, presented in Table 1 below. Correlations suggested that having more Facebook friends and more Facebook wall posts from friends was linked to lower levels of rejection sensitivity. Going online with the specific purpose to improve mood, however, was linked to high levels of rejection sensitivity.

In order to test hypotheses more rigorously, a multiple regression analysis was conducted including participant gender, family income, and baseline rejection sensitivity as control variables, and number of Facebook friends, number of Facebook wall posts, and going online to improve mood as predictor variables.

Results suggested that having more Facebook friends continued to predict a relative decrease in rejection sensitivity over time, whereas going online to improve mood predicted a relative increase in rejection sensitivity.

Figure 1. Regression model predicting relative changes in rejection sensitivity

Table 1

Discussion

People with greater rejection sensitivity may be less likely to request friends on Facebook for fear that the other person might reject the friend request, or reject them if they begin communicating.

People with greater rejection sensitivity may go online to compensate for their lack of relationships offline.

However, simply going online with the intent to improve mood may not be enough to actually improve feelings of social rejection.

Findings suggest that individuals who look to Facebook to form new relationships may be able to reduce their feelings of social rejection.

People with more friends may not have as much rejection sensitivity because they feel like they have a support system.
