A patient comes into the clinic complaining of confusion, muscle spasms, and lethargy. Tests are done (blood & urine) and the patient has decreased serum osmolarity and high urine osmolarity. The patient has SIADH

What is SIADH? correct answers Excessive amounts of ADH secreted in the body

Process: Pretty much you have too much water in your blood, causing renin and aldosterone to be suppressed (you technically do not have low blood pressure, just low concentration). Your body then does not feel the need to absorb salt, making you excrete the salt in your blood

When your body is not producing ADH, your kidneys are not reabsorbing water into the body, causing the blood concentration to be high and urine concentration to be low.
