

13.1 RNA

13.2 Ribosomes & Protein Synthesis

DNA is the genetic material of cells. The sequence of nucleotide bases in the strands of DNA carries some sort of code. In order for that code to work, the cell must be able to understand it.

What, exactly, do those bases code for? Where is the cell's decoding system?

Key Questions:

- 1) How does RNA differ from DNA?
- 2) How does the cell make RNA?
- 3) What is the genetic code and how is it read?
- 4) What role does the ribosome play in assembling proteins?
- 5) What is the "central dogma" of molecular biology?
