Bazhenov,Valery I. Yarovikov,2002 This book deals systematically with the creation of piezoelectric knock sensors for automotive engine control The authors consider the problems encountered in the theoretical modeling and design of primary piezoelectric acceleration gauges for various objects and classify specific features of automotive internal combustion engine detonation as well as basic types of knock sensors and their design concepts The advantages and disadvantages of the following piezoelectric sensors are analyzed compression type bend type shear type and resonance and semiresonance type transducers The authors describe techniques based on the calculation of electroelastic sensing elements for different kinds of deformations such as compression expansion bending and shear and analyze forced oscillations of transducers with one or several degrees of freedom **Sensors for Automotive Applications** Jiri Marek,Hans-Peter Trah,Yasutoshi Suzuki,Iwao Yokomori,2006-03-06 Taken as a whole this series covers all major fields of application for commercial sensors as well as their manufacturing techniques and major types As such the series does not treat bulk sensors but rather places strong emphasis on microsensors microsystems and integrated electronic sensor packages Each of the individual volumes is tailored to the needs and queries of readers from the relevant branch of industry An international team of experts from the leading companies in this field gives a detailed picture of existing as well as future applications They discuss in detail current technologies design and construction concepts market considerations and commercial developments Topics covered include vehicle safety fuel consumption air conditioning emergency control traffic control systems and electronic guidance using radar and video Sensors for Automotive-engine Control J. N. Reddy,Society of Automotive Engineers,1977 A Systematic Approach to Sensor Selection for Aircraft Engine Health Estimation National Aeronautics and Space Adm Nasa,2019-01-19 A systematic approach for selecting an optimal suite of sensors for on board aircraft gas turbine engine health estimation is presented The methodology optimally chooses the

engine sensor suite and the model tuning parameter vector to minimize the Kalman filter mean squared estimation error in the engine's health parameters or other unmeasured engine outputs. This technique specifically addresses the underdetermined estimation problem where there are more unknown system health parameters representing degradation than available sensor measurements. This paper presents the theoretical estimation error equations and describes the optimization approach that is applied to select the sensors and model tuning parameters to minimize these errors. Two different model tuning parameter vector selection approaches are evaluated: the conventional approach of selecting a subset of health parameters to serve as the tuning parameters and an alternative approach that selects tuning parameters as a linear combination of all health parameters. Results from the application of the technique to an aircraft engine simulation are presented and compared to those from an alternative sensor selection strategy. Sensors Applications, Sensors for Automotive Applications Jiri Marek, Hans-Peter Trah, Yasutoshi Suzuki, Iwao Yokomori, 2003-08-08. An international team of experts from the leading companies in this field gives a detailed picture of existing as well as future applications. They discuss in detail current technologies, design and construction concepts, market considerations and commercial developments. Topics covered include vehicle safety, fuel consumption, air conditioning, emergency control, traffic control systems and electronic guidance using radar and video. Meeting the growing need for comprehensive information on the capabilities, potentials and limitations of modern sensor systems. *Sensors Applications* is a book series covering the use of sophisticated technologies and materials for the creation of advanced sensors and their implementation in the key areas: process monitoring, building control, health care, automobiles, aerospace, environmental technology and household appliances. *Sensors for Automotive and Aerospace Applications* Shantanu Bhattacharya, Avinash Kumar Agarwal, Om Prakash, Shailendra Singh, 2018-11-01. This volume covers the various sensors related to automotive and aerospace sectors, discussing their properties as well as how they are realized, calibrated and deployed. Written by experts in the field, it provides a ready reference to product developers, researchers and students working on sensor design and fabrication and provides perspective on both current and future research.

Aerospace Sensors Alexander Nebylov, 2012-11-20. Modern air and space craft demand a huge variety of sensing elements for detecting and controlling their behavior and operation. These sensors often differ significantly from those designed for applications in automobile, ship, railway and other forms of transportation and those used in industrial, chemical, medical and other areas. This book offers insight into an appropriate selection of these sensors and describes their principles of operation, design and achievable performance along with particulars of their construction. Drawn from the activities of the International Federation of Automatic Control (IFAC), especially its Aerospace Technical Committee, the book provides details on the majority of sensors for aircraft and many for spacecraft, satellites and space probes. It is written by an international team of twelve authors representing four countries from Eastern and Western Europe and North America, all with

considerable experience in aerospace sensor and systems design Highlights include coverage of aerospace vehicle classification specific design criteria and the requirements of onboard systems and sensors reviews of airborne flight parameter sensors weather sensors and collision avoidance devices discussions on the important role of inertial navigation systems INS and separate gyroscopic sensors for aerospace vehicle navigation and motion control descriptions of engine parameter information collection systems including fuel quantity and consumption sensors pressure pick ups tachometers vibration control and temperature sensors and descriptions and examples of sensor integration

APPLICATION OF SENSOR FUSION FOR SI ENGINE DIAGNOSTICS AND COMBUSTION FEEDBACK, 2019 Abstract Shifting consumer mindsets and evolving government norms are forcing automotive manufacturers the world over to improve vehicle performance and also reduce greenhouse gas emissions A critical aspect of achieving future fuel economy and emission targets is improved powertrain control and diagnostics This study focuses on using a sensor fusion based approach to improving control and diagnostics in a gasoline engine A four cylinder turbocharged engine was instrumented with a suite of sensors including ion sensors exhaust pressure sensors crank position sensors and accelerometers The diagnostic potential of these sensors was studied in detail The ability of these sensors to detect knock misfires and also correlate with pressure and combustion metrics was also evaluated Lastly a neural network based approach to combine individual sensor signal information was developed The neural network was used to estimate mean effective pressure and location of fifty percent mass fraction fuel burn Additionally the influence of various neural network architectures was studied Results showed that under pseudo transient conditions a recursive neural network could use information from the low cost sensors to estimate mean effective pressure within an error of 0.1 bar and combustion phasing within 2.5 crank angle degrees

Advanced Sensors for Real-time Control of Advanced Natural-gas Reciprocating Engine Combustion A. C. Raptis, S. H. Sheen, H. T. Chien, 2003 This is the final report of a three year project under a Department of Energy Advanced Reciprocating Engine Systems contract The goal of this project is to develop advanced sensors for real time combustion monitoring of advanced natural gas reciprocating engines Two sensor technologies ion mobility spectrometry IMS and acoustic gas sensing were tested for detection of NO_x emissions and monitoring of natural gas composition This project examined two novel approaches use of a corona spark discharge ionization source for IMS and acoustic relaxation spectra of natural gas for the acoustic gas sensor We have completed evaluation of laboratory prototypes of both sensors In this report we will describe the basic elements of the sensors their operating and detection principles their performance and other issues Design modifications and suggested applications of field prototypes will also be presented
