Neuronal Inputs and Outputs of Aging and Longevity Joy Alcedo, Thomas Flatt, Elena G. Pasyukova, 2013-08-23

An animal's survival strongly depends on its ability to maintain homeostasis in response to the changing quality of its external and internal environments This is achieved through intercellular communication not only within a single tissue but also among different tissues and organ systems Thus alterations in tissue to tissue or organ to organ communications which are under genetic regulation can affect organismal homeostasis and consequently impact the aging process One of the organ systems that play a major role in maintaining homeostasis is the nervous system Considering that the nervous system includes the sensory system which perceives the complexity of an animal's environment it should be no surprise that there would be a sensory influence on homeostasis and aging To promote homeostasis any given sensory information is transmitted through short range signals via neural circuits and or through long range endocrine signals to target tissues which may in turn be neuronal or non neuronal in nature At the same time since homeostasis involves a number of feedback mechanisms non neuronal tissues can also modulate sensory and other neuronal functions Several genes that regulate signaling pathways known to affect homeostasis and aging have been shown to act in neurons in tissues that are likely downstream targets of the nervous system or through feedback regulation of neuronal activities These genes can have different temporal requirements some might function early e g by affecting neural development while others may only be required later in adulthood Some well known examples of genes involved in the neuronal regulation of homeostasis and longevity encode components of the evolutionarily conserved nutrient sensing insulin insulin like signaling pathway the stress sensing internal repair system and the mitochondrial electron transport chain Indeed the genetic perturbation of these pathways has been found to lead to numerous diseases many of which are age related and involve the nervous system such as neurodegeneration and the metabolic syndrome Despite much progress however many aspects of the neuronal inputs and

outputs that affect aging and longevity are poorly understood to date For example the precise neuronal and non neuronal circuitries and the details of the molecular mechanisms through which genes signaling pathways maintain homeostasis and affect aging in response to the environment remain to be elucidated Similarly it is presently unclear whether genes that regulate the early development of the nervous system and its consequent circuitry influence homeostasis and longevity during adulthood At the same time although many genes affecting aging are conserved both the nervous system and the aging process are highly variable within populations and among taxa Accordingly the role of natural genetic variation in shaping the neurobiology of aging is also presently unknown The aim of this Research Topic is therefore to highlight the genetic developmental and physiological aspects of the signaling networks that mediate the neuronal inputs and outputs that are required to maintain organismal homeostasis The elucidation of the effects of these neuronal activities on homeostasis may thus provide much needed insight into mechanisms that affect aging and longevity

Water Tossing Boulders Adrienne Berard,2016-10-18 A generation before Brown v Board of Education struck down America s separate but equal doctrine one Chinese family and an eccentric Mississippi lawyer fought for desegregation in one of the greatest legal battles never told On September 15 1924 Martha Lum and her older sister Berda were barred from attending middle school in Rosedale Mississippi The girls were Chinese American and considered by the school to be colored the school was for whites This event would lead to the first US Supreme Court case to challenge the constitutionality of racial segregation in Southern public schools an astonishing thirty years before the landmark Brown v Board of Education decision Unearthing one of the greatest stories never told journalist Adrienne Berard recounts how three

unlikely heroes sought to shape a new South A poor immigrant from southern China Jue Gong Lum came to America with the hope of a better future for his family Unassuming yet boldly determined his daughter Martha would inhabit that future and become the face of the fight to integrate schools Earl Browder their lawyer and staunch ally was once a millionaire and governor of Mississippi When he took the family's case Browder was both bankrupt and a political pariah a man with nothing left to lose By confronting the separate but equal doctrine the Lum family fought for the right to educate Chinese Americans in the white schools of the Jim Crow South Using their groundbreaking lawsuit as a compass Berard depicts the complicated condition of racial otherness in rural Southern society In a sweeping narrative that is both epic and intimate *Water Tossing Boulders* evokes a time and place previously defined by black and white a time and place that until now has never been viewed through the eyes of a forgotten third race In vivid prose the Mississippi Delta an empire of cotton and a bastion of slavery is reimaged to reveal the experiences of a lost immigrant community Through extensive research in historical documents and family correspondence Berard illuminates a vital forgotten chapter of America's past and uncovers the powerful journey of an oppressed people in their struggle for equality

Fat in the Fifties Nicolas Rasmussen, 2019-03-26 A riveting history of the rise and fall of the obesity epidemic during 1950s and 1960s America Metropolitan Life Insurance Company identified obesity as the leading cause of premature death in the United States in the 1930s but it wasn't until 1951 that the public health and medical communities finally recognized it as America's Number One Health Problem The reason for MetLife's interest They wanted their policyholders to live longer and continue paying their premiums Early postwar America responded to the obesity emergency but by the end of the 1960s the crisis waned and official rates of true obesity were reduced despite the fact that Americans were growing no thinner What mid century factors and forces established obesity as a politically meaningful and culturally resonant problem in the first place And why did obesity fade from public and medical consciousness only a decade later Based on archival records of health leaders as well as medical and popular literature *Fat in the Fifties* is the first book to reconstruct the prewar origins emergence and surprising disappearance of obesity as a major public health problem Author Nicolas Rasmussen explores the postwar shifts that drew attention to obesity as well as the varied approaches to its treatment from thyroid hormones to psychoanalysis and weight loss groups Rasmussen argues that the US government was driven by the new Cold War and the fear of atomic annihilation to heightened anxieties about national fitness Informed by the latest psychiatric thinking which diagnosed obesity as the result of oral fixation just like alcoholism health professionals promoted a form of weight loss group therapy modeled on Alcoholics Anonymous The intervention caught on like wildfire in 1950s suburbia But the sense of crisis passed quickly partly due to cultural changes associated with the later 1960s and partly due to scientific research some of it sponsored by the sugar industry emphasizing particular dietary fats rather than calorie intake Through this riveting history of the rise and fall of the obesity epidemic readers gain an understanding of how the American public health system ambitious strong and second to

none at the end of the Second World War was constrained a decade later to focus mainly on nagging individuals to change their lifestyle choices Fat in the Fifties is required reading for public health practitioners and researchers physicians historians of medicine and anyone concerned about weight and weight loss
