Sobolev Spaces in Mathematics I Vladimir Maz'ya, 2008-12-02 This volume marks the centenary of the birth of the outstanding mathematician of the 20th century Sergey Sobolev. It includes new results on the latest topics of the theory of Sobolev spaces, partial differential equations, analysis, and mathematical physics. *Sobolev Spaces on Metric Measure Spaces* Juha Heinonen, Pekka Koskela, Nageswari Shanmugalingam, Jeremy T. Tyson, 2015-02-05 This coherent treatment from first principles is an ideal introduction for graduate students and a useful reference for experts. *Fractal Geometry and Dynamical Systems in Pure and Applied Mathematics II* David Carfi, Michel L. Lapidus, Erin P. J. Pearse, Machiel van Frankenhuijsen, 2013-10-24 This volume contains the proceedings from three conferences: the PISRS 2011 International Conference on Analysis, Fractal Geometry, Dynamical Systems, and Economics held November 8-12, 2011 in Messina, Italy; the AMS Special Session on Fractal Geometry in Pure and Applied Mathematics in memory of Benoît Mandelbrot held January 4-7, 2012 in Boston, MA; and the AMS Special Session on Geometry and Analysis on Fractal Spaces held March 3-4, 2012 in Honolulu, HI. Articles in this volume cover fractal geometry and various aspects of dynamical systems in applied mathematics and the applications to other sciences. Also included are articles discussing a variety of connections between these subjects and various areas of physics, engineering, computer science, technology, economics, and finance, as well as of mathematics, including probability theory in relation with statistical physics and heat kernel estimates, geometric measure theory, partial differential equations in relation with condensed matter physics, global analysis on non-smooth spaces, the theory of billiards, harmonic analysis, and spectral geometry. The companion volume *Contemporary Mathematics* Volume 600 focuses on the more mathematical aspects of fractal geometry and dynamical systems. *Inequalities for Differential Forms* Ravi P. Agarwal, Shusen Ding, Craig Nolder, 2009-09-19 This monograph is the first one to systematically present a series of local and global estimates and inequalities for differential forms, in particular the ones that satisfy the A_p harmonic equations. The presentation focuses on the Hardy-Littlewood-Poincaré-Caccioppoli imbedded and reverse Hölder inequalities. Integral estimates for operators such as homotopy operator, the Laplace-Beltrami operator, and the gradient operator are discussed next. Additionally, some related topics such as BMO inequalities, Lipschitz classes, Orlicz spaces, and inequalities in Carnot groups are discussed in the concluding chapter. An abundance of bibliographical references and historical material supplement the text throughout. This rigorous presentation requires a familiarity with topics such as differential forms, topology, and Sobolev space theory. It will serve as an invaluable reference for researchers, instructors, and graduate students in analysis and partial differential equations and could be used as additional material for specific courses in these fields. *Combinatorial and Geometric Group Theory* Sean Cleary, 2002 This volume grew out of two AMS conferences held at Columbia University, New York, NY, and the Stevens Institute of Technology, Hoboken, NJ, and presents articles on a wide variety of topics in group theory. Readers will find a variety of contributions, including a collection of over 170 open problems.

in combinatorial group theory three excellent survey papers on boundaries of hyperbolic groups on fixed points of free group automorphisms and on groups of automorphisms of compact Riemann surfaces and several original research papers that represent the diversity of current trends in combinatorial and geometric group theory The book is an excellent reference source for graduate students and research mathematicians interested in various aspects of group theory

Nonlinear Potential Theory of Degenerate Elliptic Equations Juha Heinonen, Tero Kipela, Olli Martio, 2018-05-16 A self contained treatment appropriate for advanced undergraduate and graduate students this volume offers a detailed development of the necessary background for its survey of the nonlinear potential theory of superharmonic functions Starting with the theory of weighted Sobolev spaces the text advances to the theory of weighted variational capacity Succeeding chapters investigate solutions and supersolutions of equations with emphasis on refined Sobolev spaces variational integrals and harmonic functions Chapter 7 defines superharmonic functions via the comparison principle and chapters 8 through 14 form the core of the nonlinear potential theory of superharmonic functions Topics include balayage Perron's method barriers and resolutivity polar sets harmonic measure fine topology harmonic morphisms and quasiregular mappings The book concludes with explorations of axiomatic nonlinear potential theory and helpful appendixes
