This book combines the analytic principles of digital business and data science with business practice and big data. The interdisciplinary contributed volume provides an interface between the main disciplines of engineering and technology and business administration. Written for managers, engineers, and researchers who want to understand big data and develop new skills that are necessary in the digital business, it not only discusses the latest research but also presents case studies demonstrating the successful application of data in the digital business.

Methods to Assess and Manage Process Safety in Digitalized Process System Volume Six, the latest release in the Methods in Chemical Process Safety series, highlights new advances in the field with this new volume presenting interesting chapters written by an international board of authors. Provides the authority and expertise of leading contributors from an international board of authors. Presents the latest release in the Methods in Chemical Process Safety series. Sensemaking in Safety Critical and Complex Situations Stig Ole Johnsen, Thomas Porathe, 2021-07-13. Sensemaking in Safety Critical and Complex Situations. Human Factors and Design. Human factors based design that supports the strengths and weaknesses of humans are often missed during the concept and design of complex technical systems. With the focus on digitalization and automation, the human actor is often left out of the loop but needs to step in during safety critical situations. This book describes how human factors and sensemaking can be used as part of the concept and design of safety critical systems in order to improve safety and resilience. This book discusses the challenges of automation and automated systems when humans are left out of the loop and then need to intervene when the situation calls for it. It covers human control and accepts that humans must handle the unexpected and describes methods to support this. It is based on recent accident analysis involving autonomous systems that move our understanding forward and supports a more modern view on human errors to improve safety in industries such as shipping and marine. The book is for human factors and ergonomists, safety engineers, designers involved in safety critical work, and students. Stig Ole Johnsen is a Senior Researcher at SINTEF in Norway. He has a PhD from NTNU in Norway with a focus on resilience in complex socio-technical systems and has a Master's in Technology Management from MIT. NTNU. He chairs the Human Factors in Control network HFC in Norway to strengthen the human factors focus during development and implementation of safety critical technology. His research interests include meaningful human control to support safety and resilience during automation and digitalization. Thomas Porathe has a degree in Information Design from Mälardalen University in Sweden. He is currently Professor of Interaction Design at the Norwegian University of Science and Technology in Trondheim, Norway. He specializes in maritime human factors and design of maritime information systems specifically directed towards control room design, navigation, and autonomous ships. He has been working with eNavigation since 2006 in EU projects such as BLAST.

Alarm Management for Process Control Douglas H. Rothenberg, 2018-06-15 Alarm Management for Process Control elevates alarm management from a fragmented collection of procedures metrics experiences and trial and error to the level of a technology discipline It provides a complete treatment of best practices in alarm management The technology and approaches found here provide the opportunity to completely understand the what the why and the how of successful alarm systems No modern industrial enterprise particularly in such areas as chemical processing can operate without a secure and reliable infrastructure of alarms and controls they are an integral part of all production management and control systems

Improving alarm management is an effective way to provide operators with high value support and guidance to successfully manage industrial plant operations Readers will find Recommendations and guidelines are developed from fundamental concepts to provide powerful technical tools and workable approaches Alarms are treated as indicators of abnormal situations not simply sensor readings that might be out of position Alarm improvement is intimately linked to infrastructure management including the vital role of plant maintenance to alarm management the need to manage operators charter to continue to operate during abnormal situations vs cease operation And the importance of situation awareness without undue reliance upon alarms The ability to appreciate technical issues is important but this book requires no previous specific technical educational or experiential background The style and content are very accessible to a broad industrial audience from board operator to plant manager All critical tasks are explained with workflow processes examples and insight into what it all means Alternatives are offered everywhere to enable users to tailor make solutions to their particular sites

Alarm Management Bill R. Hollifield, Eddie Habibi, 2011 In this second edition Alarm Management A Comprehensive Guide various problems of alarm systems are covered with precise guidance on how they come about and how to effectively correct them It is written by individuals with vast experience in the different plants processes and environments requiring effective alarm management The second edition is filled with good examples and explanations of procedures with practical lists and tips on how one should proceed It is based on hundreds of successful projects **Chilton's I & C S** ,1991
