Metaheuristic Clustering Swagatam Das,Ajith Abraham,Amit Konar,2009-01-30 Cluster analysis means the organization of an unlabeled collection of objects or patterns into separate groups based on their similarity The task of computerized data clustering has been approached from diverse domains of knowledge like graph theory multivariate analysis neural networks fuzzy set theory and so on Clustering is often described as an unsupervised learning method but most of the traditional algorithms require a prior specification of the number of clusters in the data for guiding the partitioning process thus making it not completely unsupervised Modern data mining tools that predict future trends and behaviors for allowing businesses to make proactive and knowledge driven decisions demand fast and fully automatic clustering of very large datasets with minimal or no user intervention In this volume we formulate clustering as an optimization problem where the best partitioning of a given dataset is achieved by minimizing maximizing one single objective clustering or more multi objective clustering objective functions Using several real world applications we illustrate the performance of several metaheuristics particularly the Differential Evolution algorithm when applied to both single and multi objective clustering problems where the number of clusters is not known beforehand and must be determined on the run This volume comprises of 7 chapters including an introductory chapter giving the fundamental definitions and the last Chapter provides some important research challenges Academics scientists as well as engineers engaged in research development and application of optimization techniques and data mining will find the comprehensive coverage of this book invaluable

and algorithms **The ^ASecond Age of Computer Science** Subrata Dasgupta,2018-05-01 Between the genesis of computer science in the 1960s and the advent of the World Wide Web around 1990 computer science evolved in significant ways The author has termed this period the second age of computer science This book describes its evolution in the form of several interconnected parallel histories **Advanced Solutions in Power Systems** Mircea Eremia,Chen-Ching Liu,Abdel-Aty Edris,2016-10-03 Provides insight on both classical means and new trends in the application of power electronic and artificial intelligence techniques in power system operation and control This book presents advanced solutions for power system controllability improvement transmission capability enhancement and operation planning The book is organized into three parts The first part describes the CSC HVDC and VSC HVDC technologies the second part presents the FACTS devices and the third part refers to the artificial intelligence techniques All technologies and tools approached in this book are essential for power system development to comply with the smart grid requirements Discusses detailed operating principles and diagrams theory of modeling control strategies and physical installations around the world of HVDC and FACTS systems Covers a wide range of Artificial Intelligence techniques that are successfully applied for many power system problems from planning and monitoring to operation and control Each chapter is carefully edited with drawings and illustrations that helps the reader to easily understand the principles of operation or application Advanced Solutions in Power Systems HVDC FACTS and Artificial Intelligence is written for graduate students researchers in transmission and distribution networks and power system operation This book also serves as a reference for professional software developers and practicing engineers Multiobjective Heuristic Search Pallab Dasgupta,P. P. Chakrabarti,S. C. DeSarkar,2013-11-11 A large number of problems require the optimization of multiple criteria These criteria are often non commensurate and sometimes conflicting in nature making the task of optimization more difficult In such problems the task of creating a combined optimization function is often not easy Moreover the decision procedure can be affected by the sensitivity of the solution space and the trade off is often non linear In real life we traditionally handle such problems by suggesting not one but several non dominated solutions Finding a set of non dominated solutions is also useful in multistaged optimization problems where the solution of one stage of optimization is passed on to the next stage One classic example is that of circuit design where high level synthesis logic synthesis and layout synthesis comprise important stages of optimization of the circuit Passing a set of non dominated partial solutions from one stage to the next typically ensures better global optimization This book presents a new approach to multi criteria optimization based on heuristic search techniques Classical multicriteria optimization techniques rely on single criteria optimization algorithms and hence we are either required to optimize one criterion at a time under constraints on the others or we are asked for a single scalar combined optimization function On the other hand the multiobjective search approach maps each optimization criterion onto a distinct dimension of a vector valued cost structure **Operations Research and Management Science Handbook** A.
