ABSTRACT

This paper studies, using a laboratory experiment, the effects of uncertainty aversion (the union of risk aversion and ambiguity aversion) on behavior in a normal form game. We isolate and identify two components of uncertainty aversion in games: the effect of an agent's own uncertainty preferences and effect of the agent's beliefs regarding their opponent's uncertainty preferences. Uncertainty preferences are correlated with behavior in games. Induced beliefs about the risk preferences of an opponent have a larger effect on strategic behavior than induced beliefs about an opponent's ambiguity preferences, although both components have a significant effect on behavior. The results support the hypothesis that strategic uncertainty is an important determinant of strategic behavior, and that the response to strategic uncertainty is modulated by subject uncertainty attitudes.

1. Introduction

Strategic uncertainty is a ubiquitous feature of human interaction. Whether playing rock-paper-scissors, taking a penalty shot in soccer, playing poker, negotiating a pay raise or purchasing a house, certainty about an opponent's strategy is a rarity. A wealth of experiments on individual decision making have found that human subjects have non-neutral attitudes towards uncertainty, with a majority of subjects typically displaying either risk or ambiguity aversion.¹ Therefore, understanding the relationship between preferences over uncertainty and strategic behavior is necessary for understanding human behavior in games.

There is, however, a relative paucity of experimental studies on the role of risk and ambiguity aversion in game theoretic environments, perhaps reflecting the minor role of uncertainty aversion in the game theory literature (see Section 1.2 for a literature review). This paper asks two fundamental questions. Are there differences in behavior in strategic settings between people who are uncertainty averse and those who are not? And, do people change their behavior in strategic settings when

Decision and Game Theory for Security Branislav Bošanský, Cleotilde Gonzalez, Stefan Rass, Arunesh Sinha, 2021-10-30

This book constitutes the refereed proceedings of the 12th International Conference on Decision and Game Theory for Security GameSec 2021 held in October 2021. Due to COVID 19 pandemic the conference was held virtually. The 20 full papers presented were carefully reviewed and selected from 37 submissions. The papers focus on Theoretical Foundations in Equilibrium Computation, Machine Learning and Game Theory, Ransomware, Cyber Physical Systems, Security Innovations in Attacks and Defenses.

Behavioral Game Theory Colin F. Camerer, 2011-09-05. Game theory, the formalized study of strategy, began in the 1940s by asking how emotionless geniuses should play games, but ignored until recently how average people with emotions and limited foresight actually play games. This book marks the first substantial and authoritative effort to close this gap. Colin Camerer, one of the field's leading figures, uses psychological principles and hundreds of experiments to develop mathematical theories of reciprocity, limited strategizing, and learning, which help predict what real people and companies do in strategic situations. Unifying a wealth of information from ongoing studies in strategic behavior, he takes the experimental science of behavioral economics a major step forward. He does so in lucid, friendly prose. Behavioral game theory has three ingredients that come clearly into focus in this book: mathematical theories of how moral obligation and vengeance affect the way people bargain and trust each other; a theory of how limits in the brain constrain the number of steps of "I think he thinks" reasoning people naturally do; and a theory of how people learn from experience to make better strategic decisions. Strategic interactions that can be explained by behavioral game theory include bargaining games of bluffing as in sports and poker, strikes, how conventions help coordinate a joint activity, price competition, and patent races, and building up reputations for trustworthiness or ruthlessness in business or life. While there are many books on standard game theory that address the way ideally rational actors operate, Behavioral Game Theory stands alone in blending experimental evidence and psychology in a mathematical theory of normal strategic behavior. It is must reading for anyone who seeks a more complete understanding of strategic thinking from professional economists to scholars and students of economics, management studies, psychology, political science, anthropology, and biology.

Uncertain Decisions Luigi Luini, 2012-12-06. *Uncertain Decisions: Bridging Theory and Experiments* presents advanced directions of thinking on decision theory, in particular the more recent contributions on non-expected utility theory, fuzzy decision theory, and case-based theory. This work also provides theoretical insights on measures of risk aversion and on new problems for general equilibrium analysis. It analyzes how the thinking that underlies the theories described above spills over into real decisions and how the thinking that underlies these real decisions can explain the discrepancies between theoretical approaches and actual behavior. This work elaborates on how the most recent laboratory experiments have become an important source both for evaluating the leading theory of choice and decision and for contributing to the formation of new models regarding the

Experimental Economics: Financial Markets, Auctions, and Decision Making Fredrik Nils Andersson, Hakan Holm, 2011-06-28

Experimental Economics Financial Markets Auctions And Decision Making is based on research presented at the 20th Arne Ryde Symposium on Experimental Economics held on November 9-11 at Lund University The volume is divided into two parts In Part I interviews with prominent researchers in the field all invited speakers at the Symposium are presented Those interviewed are Peter Böhm Catherine Eckel Werner G. John Hey Daniel Kahneman Alvin Roth Vernon Smith and Martin Weber The interviews address important questions about basic experimental methods and the interpretation of results In addition these researchers answer questions relating to their specific fields and to their contributions at the Symposium They are also asked to single out the most important findings in the field Part II contains selected contributions from the conference Topics covered include attitudes towards risk and inequality pitfalls in experimental economics analysis of trading period duration robustness in learning video experiments on decision making and fairness sequential prisoners dilemmas and collusion in auctions

Debating Rationality Jennifer J. Halpern, Robert C. Stern, 2018-10-18

Decision makers strive to be rational Traditionally rational decisions maximize an appropriate return The contributors to this book challenge the common assumption that good decisions must be rational in this economic sense They emphasize that the decision making process is influenced by social organizational and psychological considerations as well as by economic concerns Relationships time pressure external demands for specific types of performance contractual expectations human biases and reactions to unfair treatment alter the decision making context and the resulting decision outcomes

Experiments in Environmental Economics Jason F. Shogren, 2018-04-27

This title was first published in 2003 Over the decades experiential methods have become an established research tool in environmental economics Economists working in this area have realised that experimental methods from economics and other disciplines such as psychology and decision theory can be applied to gain insight into the behavioral underpinnings of environmental policy Economic experiments in the lab and field are an attractive tool to address the incentive and contextual questions that arise in environmental policy Experiments have been and continue to be designed to capture the key elements of market and non market choices to test theory for pattern recognition to testbed new institutions and to value public goods including environmental protection This volume collects the most significant papers in the literature that identify the underpinnings of experimental approaches are complemented by works that specifically address the use of experimental economics to identify choice under risk conflict cooperation environmental policy instruments and environmental valuation

Advances in Behavioral Economics Colin F. Camerer, George Loewenstein, Matthew Rabin, 2011-12-12

Twenty years ago behavioral economics did not exist as a field Most economists

were deeply skeptical even antagonistic toward the idea of importing insights from psychology into their field Today behavioral economics has become virtually mainstream It is well represented in prominent journals and top economics departments and behavioral economists including several contributors to this volume have garnered some of the most prestigious awards in the profession This book assembles the most important papers on behavioral economics published since around 1990 Among the 25 articles are many that update and extend earlier foundational contributions as well as cutting edge papers that break new theoretical and empirical ground Advances in Behavioral Economics will serve as the definitive one volume resource for those who want to familiarize themselves with the new field or keep up to date with the latest developments It will not only be a core text for students but will be consulted widely by professional economists as well as psychologists and social scientists with an interest in how behavioral insights are being applied in economics The articles which follow Colin Camerer and George Loewenstein's introduction are by the editors George A Akerlof Linda Babcock Shlomo Benartzi Vincent P Crawford Peter Diamond Ernst Fehr Robert H Frank Shane Frederick Simon Gächter David Genesove Itzhak Gilboa Uri Gneezy Robert M Hutchens Daniel Kahneman Jack L Knetsch David Laibson Christopher Mayer Terrance Odean Ted O Donoghue Aldo Rustichini David Schmeidler Klaus M Schmidt Eldar Shafir Hersch M Shefrin Chris Starmer Richard H Thaler Amos Tversky and Janet L Yellen
