A COMPARISON OF RVR AND VISIBILITY REPORTS

(Presented by Bill Maynard)

SUMMARY

This paper summarizes the results of an analysis of RVR and visibility reports included in METAR / SPECI for three aerodromes. It concludes that any future forecasting of RVR, based upon visibility, must be by reference to sensors used for both RVR and visibility.

1. INTRODUCTION

1.1 A comparative analysis was undertaken of the RVR and prevailing visibility as included in METAR and SPECI over a five-year period at three aerodromes. Each of these aerodromes is seasonally exposed to winter weather and one is located north of the Arctic Circle. The assessment of prevailing visibility at each is by human estimation from a separate location from the RVR sensors, which are of a forward scatter design.

1.2 The results of this analysis suggest some sources of uncertainty that should be considered if visibility reports are to be used to infer a most probable RVR value. It concludes that these uncertainties are such that any useful forecast of RVR, based upon visibility reports, must be by reference to the same sensors being used for both RVR and visibility.
