The Airbus A350-900

Members of the first Airbus A350-900 flight crew, including Airbus flight attendants, are seen on the aircraft's tail. The aircraft is shown in flight, with the Airbus logo and 'A350-900' visible on the tail.

Spirit AeroSystems actualizes Airbus' intelligent design for the A350's center fuselage and front wing spar in Kinston, N.C.

by Lauren Lippert

The Airbus A350-900 is the world's first aircraft to feature a fully composite fuselage. The aircraft's center fuselage and front wing spar are made of carbon fiber-reinforced plastic (CFRP). The aircraft is shown in flight, with the Airbus logo and 'A350-900' visible on the tail.

The center fuselage, which makes up 40% of the aircraft's weight, is the largest of the three main sections. It is built up from 12,000 CFRP panels, which are joined together using a special adhesive. The front wing spar is also made of CFRP and is the longest of the three main sections. It is built up from 12,000 CFRP panels, which are joined together using a special adhesive.

Aircraft Scott Jackson, 2020-09-10 The key principle of systems engineering is that an aircraft should be considered as a whole and not as a collection of parts Another principle is that the requirements for the aircraft and its subsystems emanate from a logical set of organized functions and from economic or customer oriented requirements as well as the regulatory requirements for certification The resulting process promises to synthesize and validate the design of aircraft which are higher in quality better meet customer requirements and are most economical to operate This book is more of a how to and a why to rather than a what to guide It stresses systems engineering is an integrated technical managerial process that can be adapted without sacrificing quality in which risk handling and management is a major part It explains that the systems view applies to both the aircraft and the entire air transport system The book emphasizes that system engineering is not an added layer of processes on top of the existing design processes it is the glue that holds all the other processes together The readership includes the aircraft industry suppliers and regulatory communities especially technical program and procurement managers systems design and specialty engineers human factors reliability safety etc students of aeronautical and systems engineering and technical management and government agencies such as FAA and JAA Systems Engineering for Commercial Aircraft

Mr Scott Jackson, 2015-03-28 Explains the principles of systems engineering in simple understandable terms and describes to engineers and managers how these principles would be applied to the development of commercial aircraft

Aviation and Its Management Arif Sikander, 2019-05-22 Aviation has grown leaps and bounds within the last decade Aviation courses and training at all levels have shown an exponential increase around the globe There has been a restricted focus on writing books in this sector of the economy mainly due to the shortage of expertise in this specialist and complex area This book was written with the purpose of meeting this need of the aviation sector Due to the diversified nature of aviation knowledge which includes flying engineering airports allied trades for aircraft and airports airline and airport management and operations education etc one text alone will not suffice and do justice to address all these areas It is envisaged to develop subsequent parts of this book to cover all these knowledge areas This book is the first installment of any subsequent books and explores issues including airline management and operations airline business models airport systems flight operational procedures aircraft maintenance runway safety management systems and air traffic management In particular attention will be given to aspects such as analysis of air traffic in a domestic market runway safety management systems critical success factors for multiple MRO service providers key pain points of the industry to be addressed to move into the future new research on hub airports for international flights new business models for airlines and runway safety management systems This book is useful to aviation managers educators students and professionals interested in any of the above issues
