The Right to Life in Armed Conflict Ian Park, 2018-02-02 The application of the right to life during armed conflict is an issue that polarizes opinion and generates considerable debate Many believe that human rights law has no place in armed conflict yet the European Court of Human Rights and domestic courts have ruled that it can apply The exact contours of how the right to life applies during armed conflict remain largely unresolved In this text Ian Park seeks to clearly articulate the right to life obligations of states during both international and non international armed conflict in respect of those individuals affected by the actions of states armed forces and members of the armed forces themselves In determining the right to life obligations of states Park identifies the sources of law from which right to life obligations arise how case law has developed and modified these obligations and analyses how the law creates obligations in practice Implicit in this analysis is a consideration of recent armed conflicts and the actions of states that lead to a series of concrete proposals designed to best ensure compliance with a state's right to life obligations

Sollinger, 2013 In the U S Army as elsewhere transmission of digitized packets on Internet protocol and space based networks is rapidly supplanting the use of old technology e g dedicated analog channels when it comes to information sharing and media broadcasting As the Army moves forward with these changes it will be important to identify the implications and potential boundaries of cyberspace operations An examination of network operations information operations and the more focused areas of electronic warfare signals intelligence electromagnetic spectrum operations public affairs and psychological operations in the U S military found significant overlap that could inform the development of future Army doctrine in these areas In clarifying the prevailing boundaries between these areas of interest it is possible to predict the progression of these boundaries in the near future The investigation also entailed developing new definitions that better capture this overlap for such concepts as information warfare This is important because the Army is now studying ways to apply its cyber power and is reconsidering doctrinally defined areas that are integral to operations in cyberspace It will also be critical for the Army to approach information operations with a plan to organize and if possible consolidate its operations in two realms the psychological which is focused on message content and people and the technological which is focused on content delivery and machines
