**Alluvial Geoarchaeology** A. G. Brown, 2009-12-03 This comprehensive technical manual is designed to give archaeologists the necessary background knowledge in environmental science required to excavate and analyze archaeological sites by rivers and on floodplains Bringing together information on the evolution and exploitation of floodplain and river landscapes this text draws on examples from Britain Europe North America and Australasia An important theme is the interaction between climatic and cultural forces and the transformation of riverine environments **The Earth's Land**

Reitz, Elizabeth S. Wing, 1999-02-04 Zooarchaeology is a detailed reference manual for students and professional archaeologists interested in identifying and analysing animal remains from archaeological sites Drawing on material from all over the world and covering a time span from the Pleistocene to the nineteenth century AD the emphasis is on animals whose

remains inform us about many aspects of the relationships between humans and their natural and social environments especially site formation processes subsistence strategies and paleoenvironments The authors discuss suitable methods and theories for all vertebrate classes and molluscs and include hypothetical examples to demonstrate these There are extensive references and illustrations to help in the process of identification

**Palaeopathology** Tony Waldron, 2020-12-10 An evidence based account of how to recognise and diagnose pathological lesions in human remains The History of the Study of Landforms or the Development of Geomorphology, Volume 5 T.P. Burt, A.S. Goudie, H.A. Viles, 2022-10-20 Co published with British Society for Geomorphology This volume is the fifth in the definitive series The History of the Study of Landforms or the Development of Geomorphology Volume 1 1964 dealt with contributions to the field up to 1890 Volume 2 1973 with the concepts and contributions of William Morris Davis and Volume 3 1991 covered historical and regional themes during the classic period of geomorphology 1890 1950 Volume 4 2008 concentrated on studies of geomorphological processes and Quaternary geomorphology between 1890 and 1965 by the end of this period process based studies had become dominant Volume 5 builds on this platform covering in detail the revolutionary changes in approach that characterized the study of geomorphology in the second half of the twentieth century It is divided into three sections the first deals with changes in approach and method the second with changes in ideas and the broader scientific context within which geomorphology is studied and the final section details advances in research on processes and landforms The volume's objective is to describe and analyse many of the developments that provide a foundation for the rich and varied subject matter of twenty first century geomorphology

**Persistent Traditions** Luc W.S.W. Amkreutz, 2013-12-19 The adoption of agriculture is one of the major developments in human history Archaeological studies have demonstrated that the trajectories of Neolithisation in Northwest Europe were diverse This book presents a study into the archaeology of the communities involved in the process of Neolithisation in the Lower Rhine Area 5500 2500 cal BC It elucidates the role played by the indigenous communities in relation to their environmental context and in view of the changes that becoming Neolithic brought about This work brings together a comprehensive array of excavated archaeological sites in the Lower Rhine Area Their analysis shows that the succession of Late Mesolithic Swifterbant culture Hazendonk group and Vlaardingeng culture societies represents a continuous long term tradition of inhabitation of the wetlands and wetland margins of this area forming a culturally continuous record of communities in the transition to agriculture After demonstrating the diversity of the Mesolithic the subsequent developments regarding Neolithisation are studied from an indigenous perspective Foregrounding the relationship between local communities and the dynamic wetland landscape the study shows that the archaeological evidence of regional inhabitation points to long term flexible behaviour and pragmatic decisions being made concerning livelihood food economy and mobility This disposition also influenced how the novel elements of Neolithisation were incorporated Animal husbandry crop cultivation and sedentism were an addition to the existing broad spectrum economy but were incorporated

within a set of integrative strategies For the interpretation of Neolithisation this study offers a complementary approach to existing research Instead of arguing for a short transition based on the economic importance of domesticates and cultigens at sites this study emphasises the persistent traditions of the communities involved New elements instead of bringing about radical changes are shown to be attuned to existing hunter gatherer practices By documenting indications of the mentalit of the inhabitants of the wetlands it is demonstrated that their mindset remained essentially Mesolithic for millennia This book is accompanied by a separate 422 page volume containing the appendices These constitute a comprehensive inventory of 159 mostly excavated archaeological sites in the Lower Rhine Area

*Society and Exploitation Through Nature* Martin Phillips,Tim Mighall,2014-06-06 Society and Exploitation Through Nature offers an integrated approach to the environment linking the philosophical social and physical sciences to environmental problems and issues The text covers three main themes exploitation of nature and society the limits of exploitation through sustainability and managing environmental problems These themes are illustrated throughout the book with global case studies

**The Creation of Monuments** Alistair Oswald,Carolyn Dyer,Martyn Barber,2014-07-15 Neolithic Causewayed enclosures are amongst the oldest rarest and most enigmatic of the ancient monuments found in Europe First recognised as a distinct type in the 1920s sixty nine certain or probable examples have now been identified in the British Isles As a class they are of outstanding importance for while their precise functions remain unclear they represent the first non funerary monuments and the earliest instance of the enclosure of open space This book presents an overview of the findings of a systematic national programme of research carried out by the RCHME now merged with English Heritage Every certain probable and suggested causewayed enclosure in England has been investigated through integrated aerial and field survey Specialist reconnaissance flying has been undertaken along with the thorough analysis of aerial photographs taken from the 1920s onwards This has greatly increased the number of sites known turning the spotlight onto many that have received little or no archaeological attention in the past The aerial surveys now available offer a new basis for improved understanding Analytical field investigations of the few causewayed enclosures that are well preserved as earthworks have also squeezed fresh information out of even those long familiar to archaeologists Far from merely dotting the i s and crossing the t s of past fieldworkers these detailed surveys have led to the rejection of some long held theories and the proposal of new interpretations This book significantly advances the understanding of causewayed enclosures both as individual monuments and as a class It is a major contribution to the understanding of the British Neolithic and to landscape archaeology more generally

*Environmental Archaeology* Elizabeth Reitz, Myra Shackley, 2012-06-05 One of the most significant developments in archaeology in recent years is the emergence of its environmental branch the study of humans interactions with their natural surroundings over long periods and of organic remains instead of the artifacts and household items generally associated with sites With the current attention paid to human responsibility for environmental change this innovative field is recognized by scientists conservation and heritage managers and policymakers worldwide In this context comes *Environmental Archaeology* by Elizabeth Reitz and Myra Shackley updating the seminal 1981 text *Environmental Archaeology* by Myra Shackley Rigorously detailed yet concise and accessible this volume surveys the complex and technical field of environmental archaeology for researchers interested in the causes consequences and potential future impact of environmental change and archaeology Its coverage acknowledges the multiple disciplines involved in the field expanding the possibilities for using environmental data from archaeological sites in enriching related disciplines and improving communication among them Introductory chapters explain the processes involved in the formation of sites introduce research designs and field methods and walk the reader through biological classifications before focusing on the various levels of biotic and abiotic materials found at sites including Sediments and soils Viruses bacteria archaea protists and fungi Bryophytes and vascular plants Wood charcoal stems leaves and roots Spores pollen and other microbotanical remains Arthropods molluscs echinoderms and vertebrates Stable isotopes elements and biomolecules The updated *Environmental Archaeology* is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites The updated *Environmental Archaeology* is a major addition to the resource library of archaeologists environmentalists historians researchers policymakers anyone involved in studying managing or preserving historical sites

**Dealing with biases** Hendrik Feiken, 2014-09-18 This book explores the bias that is introduced by erosion and sedimentation on the distribution of archaeological materials in Mediterranean landscapes It describes innovative and interdisciplinary work that led to the formulation of a broad range of geo archaeological approaches that are applied to two Italian areas studied intensively by the Groningen Institute of Archaeology the Pontine Region in South Lazio and the Raganello Basin in North Calabria The approaches deal with geological biases affecting the study of protohistoric remains in the sedimentary part of the Pontine plain the development of a detailed landscape classification approach to predict and test site location preferences and survey biases in the uplands of both study areas and the development and evaluation of an innovative computerised landscape evolution model for a test area in the Raganello Basin uplands In addition to the presented case study this book also shows how the three geo archaeological approaches can be applied in a wider context to quantitatively understand how erosion and sedimentation bias our understanding of archaeological records

Tools in Fluvial Geomorphology G. Mathias Kondolf, Hervé Piégay, 2016-04-28 Fluvial Geomorphology studies the biophysical processes acting in rivers and the sediment patterns and landforms resulting from them It is a discipline of synthesis with roots in geology geography and river engineering and with strong interactions with allied fields such as ecology engineering and landscape architecture This book comprehensively reviews tools used in fluvial geomorphology at a level suitable to guide the selection of research methods for a given question Presenting an integrated approach to the interdisciplinary nature of the subject it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management Thoroughly updated since the first edition in 2003 by experts in their subfields the book presents state of the art tools that have revolutionized fluvial geomorphology in recent decades such as physical and numerical modelling remote sensing and GIS new field techniques advances in dating tracking and sourcing statistical approaches as well as more traditional methods such as the systems framework stratigraphic analysis form and flow characterisation and historical analysis This book Covers five main types of geomorphological questions and their associated tools historical framework spatial framework chemical physical and biological methods analysis of processes and forms and future understanding framework Provides guidance on advantages and limitations of different tools for different applications data sources equipment and supplies needed and case studies illustrating their application in an integrated perspective It is an essential resource for researchers and professional geomorphologists hydrologists geologists engineers planners and ecologists concerned with river management conservation and restoration It is a useful

supplementary textbook for upper level undergraduate and graduate courses in Geography Geology Environmental Science Civil and Environmental Engineering and interdisciplinary courses in river management and restoration Roman Butrint Inge Lyse Hansen, Richard Hodges, 2022-01-15 Butrint ancient Buthrotum has taken many forms in different ages shaped by the near constant interaction between the place its lagoonal landscape and the Mediterranean Though Butrint does not appear on any of the records of early Greek colonization to identify it as a Corcyrean settlement strong links must have existed between it and the metropolitan Corinthian colony of Corfu Blessed with springs that possessed healing qualities a small polis was created extended to incorporate a healing sanctuary dedicated to Asclepius Julius Caesar harboring at Butrint in urgent need of supplies to sustain his struggle against Pompey must have viewed the sanctuary ringed by largely dried out marshland as the perfect site to settle veterans as a colony It was an obvious cornerstone in controlling the passage from the Adriatic to the Aegean The early settlers seem to have been limited in number and possibly mainly of civilian status However the political changes to the city s magistrature were immediate and within a relatively short time span fundamental changes to the physical make up of the city were set in motion Its new Roman status also located Butrint as a directly before the highest authorities in Rome and within fifteen years or so under Augustus s guidance following his victory at Actium the city was refounded as a colony and awarded a pivotal role in Virgil s court sponsored foundation epic The Aeneid Now linked to the Victory City of Nicopolis rather than in the shadow of Corfu Butrint prospered The urban fabric evolved sometimes faltered but was essentially sustained until the later 6th century A D This present volume is an assessment of the Roman archaeology a compilation of studies and field reports that focuses upon the foundation and early history of the colony *An Introduction to Peatland Archaeology and Palaeoenvironments* Benjamin R. Gearey, Henry P. Chapman, 2022-12-02 Peatlands are regarded as having exceptional archaeological value due to the fact the waterlogged conditions of these wetlands can preserve organic remains that are almost entirely lost from the majority of dryland contexts This is certainly true although the remarkable preservation of sites and artifacts is just one aspect of their archaeological importance This book provides an accessible introduction to the ecology and formation processes of peatlands and to the different archaeological and palaeoenvironmental techniques that have been developed and adapted for the study of these environments It provides an outline of the major themes and methods and as a guide to other more detailed and technical literature concerning peatland archaeology The book is aimed at undergraduate and postgraduate students in archaeology earth sciences and cognate disciplines but will be useful to professional archaeologists who are looking to develop their expertise in this field Whilst the assumption is that the reader has little knowledge of peatlands a general archaeological background is necessary including some knowledge of techniques and approaches **The English Coast** Peter Murphy, 2011-10-20 This book examines the interaction between people and the coast of England It spans from 700 000 years ago and the earliest evidence of humans in this remote corner of north west Europe to the end of the 20th century The coastline has witnessed interesting and

significant events throughout history and looks set to do so in the future Often it is the first place where changes can be seen for example the effects of climate change It is also where evidence for human adaptation to environmental changes can most readily be seen The coast has of course also been a cultural contact zone for millennia in terms of trade industry immigration and conflict We are certainly at a time of great environmental and economic transition so it is apt to now take a long view and place current events in context Some changes happening today may seem unprecedented but in fact are not while others are entirely new One thing we can be sure of is that the coast and sea will become increasingly important to us both as an economic benefit and as a threat

Agriculture and Industry in South-Eastern Roman Britain David Bird, 2016-12-31 The ancient counties surrounding the Weald in the SE corner of England have a strongly marked character of their own that has survived remarkably well in the face of ever increasing population pressure The area is however comparatively neglected in discussion of Roman Britain where it is often subsumed into a generalised treatment of the civilian part of Britannia that is based largely on other parts of the country This book aims to redress the balance The focus is particularly on Kent Surrey and Sussex account is taken of information from neighboring counties particularly when the difficult subsoils affect the availability of evidence An overview of the environment and a consideration of themes relevant to the South East as a whole accompany 14 papers covering the topics of rural settlement in each county crops querns and millstones animal exploitation salt production leatherworking the working of bone and similar materials the production of iron and iron objects non ferrous metalworking pottery production and the supply of tile to Roman London Agriculture and industry provides an up to date assessment of our knowledge of the southern hinterland of Roman London and an area that was particularly open to influences from the Continent
