Computer Methods and Programs in Biomedical Signal and Image Processing Lulu Wang, 2020-03-18 This book aims to provide a brief update to the current status of and advances in computational methods and programs used for the development of the theory and practice of biomedical signal and image communication. The book comprises a collection of invited manuscripts written in a convenient way and of manageable length. These timely collections will provide an invaluable resource for initial inquiries into technologies and will encapsulate the latest developments and applications with reference sources for further detailed information. The methods described in this book cover a wide range of computational algorithms that are widely used in bioengineering and biomedicine. The content and format are specifically designed to stimulate the further development and application of these technologies by reaching out to non specialists across a broad audience. This book is intended to expose the latest developments of scientists and engineers covering a variety of complementary topics to enhance people's overall understanding of computer science and biomedical image communications. It will benefit students, scientists and researchers in applied computer science. Engineers and clinicians working in imaging will also find this book useful.

Communication and Networking Dominik Slezak, Thanos Vasilakos, MingChu Li, Kouichi Sakurai, 2009-12-01 As future generation information technology FGIT becomes specialized and fragmented it is easy to lose sight that many topics in FGIT have common threads and because of this advances in one discipline may be transmitted to others. Presentation of recent results obtained in different disciplines encourages this interchange for the advancement of FGIT as a whole. Of particular interest are hybrid solutions that combine ideas taken from multiple disciplines in order to achieve something more significant than the sum of the individual parts. Through such hybrid philosophy a new principle can be discovered which has the propensity to propagate throughout multifaceted disciplines. FGIT 2009 was the first mega conference that attempted to follow the above idea of hybridization in FGIT in a form of multiple events related to particular disciplines of IT conducted by separate scientific committees but coordinated in order to expose the most important contributions. It included the following international conferences: Advanced Software Engineering and Its Applications, ASEA Bio Science and Bio Technology, BSBT Control and Automation, CA Database Theory and Application, DTA Disaster Recovery and Business Continuity, DRBC published independently, Future Generation Communication and Networking, FGCN that was combined with Advanced Communication and Networking, ACN Grid and Distributed Computing, GDC Multimedia, Computer Graphics and Broadcasting, MulGraB Security Technology, SecTech, Signal Processing, Image Processing and Pattern Recognition, SIP and e Service Science and Technology, UNESST.
