Mathematical Action & Structures of Noticing

, 2009-01-01 John Mason has been a prominent figure in the research field of mathematics education for several decades His principal focus has been thinking about mathematical problems supporting those who wish to foster and sustain their own thinking and the thinking of others Among the many markers of his esteemed career was the 1984 publication of *Thinking Mathematically* with Leone Burton and Kaye Stacey It has become a classic in the field having been translated into many languages and in use in countries around the world *Thinking Mathematically* and other writings in his substantial body of work are used with advanced high school students with pre service and practicing teachers and by researchers who are interested in the nature of doing and learning mathematics This book is not and at the same time is a tribute to the enormous contributions made by Mason to mathematics education It is not a tribute book because every chapter is a report of research and thinking by the authors not simply a statement of appreciation All engage with how others have taken Mason's ideas forward to extend their own research and thinking At the same time it is a tribute book It is about how research and teaching has been inspired by Mason through his substantial opus and his vibrant presence in a network of mathematics educators

Symbolizing and Communicating in Mathematics Classrooms Paul Cobb, Erna Yackel, Kay McClain, 2012-11-12 This volume grew out of a symposium on discourse tools and instructional design at Vanderbilt University in 1995 that brought together a small international group to grapple with issues of communicating symbolizing modeling and mathematizing particularly as these issues relate to learning in the classroom The participants invited to develop chapters for this book all internationally recognized scholars in their respective fields were selected to represent a wide range of theoretical perspectives including mathematics education cognitive science sociocultural theory and discourse theory The work is distinguished by the caliber of the contributors the significance of the topics addressed in the current era of reform in mathematics education and the diversity of perspectives taken to a common set of themes and issues The book is intended for those who are seeking to expand their understanding of the complexity of learning in order to enhance the learning experiences students have in schools primarily researchers instructional designers and graduate students in mathematics education as well as those in other fields including science education instructional design in general discourse theory and

semiotics **Resources in Education** ,1987 **Foundations for the Future in Mathematics Education** Richard A. Lesh, Eric Hamilton, James J. Kaput, 2020-10-07 The central question addressed in *Foundations for the Future in Mathematics Education* is this: What kind of understandings and abilities should be emphasized to decrease mismatches between the narrow band of mathematical understandings and abilities that are emphasized in mathematics classrooms and tests and those that are needed for success beyond school in the 21st century? This is an urgent question. In fields ranging from aeronautical engineering to agriculture and from biotechnologies to business administration, outside advisors to future-oriented university programs increasingly emphasize the fact that beyond school the nature of problem-solving activities has changed dramatically during the past twenty years as powerful tools for computation, conceptualization, and communication have led to fundamental changes in the levels and types of mathematical understandings and abilities that are needed for success in such fields. For K-12 students and teachers, questions about the changing nature of mathematics and mathematical thinking beyond school might be rephrased to ask: If the goal is to create a mathematics curriculum that will be adequate to prepare students for informed citizenship as well as preparing them for career opportunities in learning organizations in knowledge economies in an age of increasing globalization, how should traditional conceptions of the 3Rs be extended or reconceived? Overall, this book suggests that it is not enough to simply make incremental changes in the existing curriculum whose traditions developed out of the needs of industrial societies. The authors, beyond simply stating conclusions from their research, use results from it to describe promising directions for a research agenda related to this question. The volume is organized in three sections. Part I focuses on naturalistic observations aimed at clarifying what kind of mathematical thinking people really do when they are engaged in real-life problem-solving or decision-making situations beyond school. Part II shifts attention toward changes that have occurred in kinds of elementary but powerful mathematical concepts, topics, and tools that have evolved recently and that could replace past notions of basics by providing new foundations for the future. This section also initiates discussions about what it means to understand the preceding ideas and abilities. Part III extends these discussions about meaning and understanding and emphasizes teaching experiments aimed at investigating how instructional activities can be designed to facilitate the development of the preceding ideas and abilities. *Foundations for the Future in Mathematics Education* is an essential reference for researchers, curriculum developers, assessment experts, and teacher educators across the fields of mathematics and science education. **Philosophy, Learning and the Mathematics Curriculum** Xuehui Xie, Phil Francis Carspecken, 2019-02-18 Mathematics curriculums used in progressive classrooms of the United States and in classrooms of the People's Republic of China presuppose markedly different philosophies. Xie and Carspecken reconstruct different assumptions operating implicitly within mathematics curriculums developed by the Ministry of Education in China and NCTM in the United States. Each curriculum is constructed upon a deep structure holistically integrating presuppositions about the nature of the human self, society, learning processes, language, concepts, human

development freedom authority and the epistemology and ontology of mathematical knowledge Xie and Carspecken next present an extended discussion of the two main philosophical traditions informing these curriculums dialectical materialism in the case of the Chinese mathematics curriculum and Dewey's instrumental pragmatism in the case of NCTM Both philosophies were developed as movements out of Hegelian idealism while retaining the anti dualist and anti empiricist insights of Hegel's thought The history of dialectical materialism and Dewey's instrumentalism is carefully examined by the authors to identify both similarities and sharp differences in the resulting mature philosophies Drawing upon more recent philosophies of intersubjectivity Brandom Habermas and dialectical materialist psychologies Vygotsky Luria the authors conclude this book with arguments for overcoming the limitations of a purely instrumentalist framework and for expanding potentialities implicit within dialectical philosophies This book will be of value to a broad audience including mathematics educators philosophers curriculum theorists social theorists and those who work in comparative education and learning science
