Fundamentals of Modern Manufacturing Mikell P. Groover,2012-09-24 Engineers rely on Groover because of the book s quantitative and engineering oriented approach that provides more equations and numerical problem exercises The fifth edition introduces more modern topics including new materials processes and systems End of chapter problems are also thoroughly revised to make the material more relevant Several figures have been enhanced to significantly improve the quality of artwork All of these changes will help engineers better understand the topic and how they apply it in the field

Introduction to Manufacturing Processes John A. Schey,1987 This revision aims to address changes that have taken effect since the publication of the second edition The most significant change has been in the attitude of industry to concurrent engineering In 1987 mostly lip service was paid to it today it has become general practice in most competitive corporations In the second edition the author discussed this as the manufacturing system In the third edition it becomes the focal point Concurrent engineering involves the whole product realization process including product concept performance criteria mechanical design and analysis materials selection process planning and modeling production control automation assembly management and others An introductory text cannot possibly cover all of these topics hence the

emphasis of the third edition remains on the physical principles and the application of these principles to processes The major difference relative to the second edition will be the emphasis on interactions between process and design Capabilities and limitations of processes will be highlighted to show what they mean in terms of design possibilities and design modifications will be suggested for ease of manufacture Impact on the environment and possibilities for recycling will be woven into the entire text

Manufacturing Engineering and Technology Serope Kalpakjian,1992 A comprehensive text for students in manufacturing mechanical industrial and metallurgical and materials engineering programs providing an understanding of the interrelationships among the many technical and economic factors involved in manufacturing This revised and updated edition second was 1992 expands its coverage of technological advances including abrasive machining computer simulation of manufacturing processes and systems instrumentation laser beams in manufacturing nanophase ceramics rapid prototyping semisolid metalworking surface texturing and tool condition monitoring Annotation copyright by Book News Inc Portland OR

Information Sources in Engineering Roderick A. MacLeod,Jim Corlett,2005 The aim of each volume of this series Guides to Information Sources is to reduce the time which needs to be spent on patient searching and to recommend the best starting point and sources most likely to yield the desired information The criteria for selection provide a way into a subject to those new to the field and assists in identifying major new or possibly unexplored sources to those who already have some acquaintance with it The series attempts to achieve evaluation through a careful selection of sources and through the comments provided on those sources
