Marine Technology Operations Theory Practice By O:

Marine Technology and Operations O. Gudmestad, 2015-07-22 A marine engineer will need to have a broad background of knowledge within several aspects of marine design and operations. These aspects relate to the design of facilities for offshore applications and evaluation of operational conditions for marine installation and modification maintenance works. Such needs arise in the marine industries in the offshore oil and gas industry as well as in the offshore renewable industry. Developed from knowledge gained throughout the author's engineering career, this book covers several of the themes where engineers need knowledge and also serves as a teaser for those who will go into more depth on the different thematic aspects discussed. Details of qualitative risk analysis, which is considered an excellent tool to identify risks in marine operations, are also included. The book is the author's attempt to develop a text for those in marine engineering science who like a practical and solid mathematical approach to marine engineering. It is the intention that the book can serve as an introductory textbook for master degree courses in marine sciences and be of inspiration for teachers who will extend the course into specialisation courses on stability of vessels, higher order wave analysis, nonlinear motions of vessels, arctic offshore engineering, etc. The book could also serve as a handbook for PhD students and researchers who need a handy introduction to solving marine technology related problems.

Coastal Cities and their Sustainable Future G.R. Rodriguez, C.A. Brebbia, 2015-09-15 This book contains papers presented at the International Conference on Coastal Cities and their Sustainable Future. First held in 2015, the conference evolved from a series of conferences on coastal processes, sustainable development, and city sustainability that began in 1992. The growth of world population and the preference for living in coastal areas has resulted in their ever-increasing development. Coastal areas are the most common destination which brings in economic growth but implies additional urban development and increases the need for resources, infrastructure, and services. The activities common to coastal cities require the development of well-planned and managed urban environments not only for reasons of efficiency and economics but also to avoid inflicting environmental degradation and the resultant deterioration of quality of life and human health. To resolve these problems, it is necessary to consider coastal cities as dynamic complex systems which need energy, water, food, and other resources in order to work and generate diverse activities with the aim of offering a socioeconomic climate and better quality of life. As a consequence, it is essential to integrate the management and sustainable development of coastal cities with science, technology, architecture, socioeconomics, and planning, all collaborating to provide support to decision makers. Because of the complex nature of such integrated planning, the support of computational models is essential in order for planners to explore various options and to forecast future services and plans. These models seek to simulate the dynamic of coastal cities leading to potential solutions. The multidisciplinary papers in the book examine some of the possible models and potential solutions. Contents include topics such as Landscape and urban planning and design, The coastal city and its environs, Infrastructures and eco architecture, City heritage and regeneration, Urban transport and

communications Commercial ports fishing and sports harbours Energy systems Water resources management City Waterfront interaction Coastal city beaches Quality of life and city leisure Tourism and the city Coastal processes Water pollution Air pollution City waste management Acoustical and thermal pollution Coastal risk assessment Coastal flooding Landslides Emergency plans and evacuation systems Health services management Intercity issues Socio economic issues Legal aspects Modelling and simulation of coastal city systems Safety and Reliability.
