Mathematics A. D. Aleksandrov, A. N. Kolmogorov, M. A. Lavrent'ev, 2012-05-07 Major survey offers comprehensive coherent discussions of analytic geometry algebra differential equations calculus of variations functions of a complex variable prime numbers linear and non Euclidean geometry topology functional analysis more 1963 edition **Mathematics: Its Content, Methods and Meaning** ,1963 *Mathematics, Its Content, Methods, and Meaning* Matematicheskii institut im. V.A. Steklova, 1969 **Mathematics** Matematicheskii institut im. V.A. Steklova, 1990 **Mathematics** A. D. Aleksandrov, A. N. Kolmogorov, M. A. Lavrent'ev, 1969 A comprehensive exposition of mathematics tracing the history and cultural significance of mathematical ideas from antiquity to the present day Mathematics which originated in antiquity in the needs of daily life has developed into an immense system of widely varied disciplines Like the other sciences it reflects the laws of the material world around us and serves as a powerful instrument for our knowledge and mastery of nature But the high level of abstraction peculiar to mathematics means that its newer branches are relatively inaccessible to nonspecialists This abstract character of mathematics gave birth even in antiquity to idealistic notions about its independence of the material world In recent years many popular books about mathematics have appeared but many of them have neglected the twentieth century the undisputed golden age of mathematics This book undertakes the ultimate task of mathematical exposition outlining the history and cultural significance of mathematical ideas and their continuous development from the earliest beginnings of history to the present day *A First Course in Functional Analysis* Martin Davis, 2013-01-01 Designed for undergraduate mathematics majors this introductory treatment is based on the distinguished author's lecture notes The self contained exposition of Gelfand's proof of Wiener's theorem explores set theoretic preliminaries normed linear spaces and algebras functions on Banach spaces homomorphisms on normed linear spaces and analytic functions into a Banach space 1966 edition **Statistical Independence in Probability, Analysis and Number Theory** Mark Kac, 2018-08-15 This concise monograph by a well known mathematician shows how probability theory in its simplest form arises in a variety of contexts and in many different mathematical disciplines 1959 edition *Calculus: A Rigorous First Course* Daniel J. Velleman, 2017-01-05 Rigorous and rewarding text for undergraduate math majors covers usual topics of first year calculus limits derivatives integrals and infinite series Requires only background in algebra and trigonometry Solutions available to instructors 2016 edition *Natural Deduction* Dag Prawitz, 2006-02-24 An innovative approach to the semantics of logic proof theoretic semantics seeks the meaning of propositions and logical connectives within a system of inference Gerhard Gentzen invented proof theoretic semantics in the early 1930s and Dag Prawitz the author of this study extended its analytic proofs to systems of natural deduction Prawitz's theories form the basis of intuitionistic type theory and his inversion principle constitutes the foundation of most modern accounts of proof theoretic semantics The concept of natural deduction follows a truly natural progression establishing the relationship between a

noteworthy systematization and the interpretation of logical signs As this survey explains the deduction s principles allow it to proceed in a direct fashion a manner that permits every natural deduction s transformation into the equivalent of normal form theorem A basic result in proof theory the normal form theorem was established by Gentzen for the calculi of sequents The proof of this result for systems of natural deduction is in many ways simpler and more illuminating than alternative methods This study offers clear illustrations of the proof and numerous examples of its advantages

Fourier Analysis on Groups Walter Rudin,2017-04-19 Self contained treatment by a master mathematical expositor ranges from introductory chapters on basic theorems of Fourier analysis and structure of locally compact Abelian groups to extensive appendixes on topology topological groups more 1962 edition

[Nonlinear Differential Equations](#) Raimond A. Struble,2018-01-16 Detailed treatment covers existence and uniqueness of a solution of the initial value problem properties of solutions properties of linear systems stability of nonlinear systems and two dimensional systems 1962 edition

Data Structures & Algorithm Analysis in C++ Clifford A. Shaffer,2011-01-01 A comprehensive treatment focusing on the creation of efficient data structures and algorithms this text explains how to select or design the data structure best suited to specific problems It uses C as the programming language and is suitable for second year data structure courses and computer science courses in algorithmic analysis

Laser Light Scattering Benjamin Chu,2007-05-11 Geared toward upper level undergraduate and graduate students this text introduces the interdisciplinary area of laser light scattering It focuses chiefly on quasielastic laser scattering discussing theoretical concepts at a realistic level Some background in the physical sciences is assumed but the opening chapters offer a brief review of classical electricity and magnetism as well as the general scattering theory Topics include basic theoretical concepts related to light mixing spectroscopy characteristics of the Fabry Perot interferometer and photon counting fluctuations The author a distinguished professor in the Department of Chemistry at Stony Brook University discusses experimental methods including setting up a light scattering spectrometer using digital photon counting and correlation techniques Subsequent chapters explore applications to macromolecular systems anemometry and its utility in reaction kinetics and critical opalescence References appear throughout the text

Principles of Topology Fred H. Croom,2016-03-17 Topology is a natural geometric and intuitively appealing branch of mathematics that can be understood and appreciated by students as they begin their study of advanced mathematical topics Designed for a one semester introduction to topology at the undergraduate and beginning graduate levels this text is accessible to students familiar with multivariable calculus Rigorous but not abstract the treatment emphasizes the geometric nature of the subject and the applications of topological ideas to geometry and mathematical analysis Customary topics of point set topology include metric spaces general topological spaces continuity topological equivalence basis subbasis connectedness compactness separation properties metrization subspaces product spaces and quotient spaces In addition the text introduces geometric differential and algebraic topology Each chapter includes historical notes to put important developments into their

historical framework Exercises of varying degrees of difficulty form an essential part of the text **Reliability Theory and Practice** Igor Bazovsky,2013-04-15 Written by a pioneer of reliability methods this text applies statistical mathematics to analysis of electrical mechanical and other systems employed in airborne missile and ground equipment 1961 edition

Lapses in Mathematical Reasoning V. M. Bradis,L. Minkovskii,A. K. Kharcheva,2016-10-28 Unique effective system for teaching mathematical reasoning leads students toward clearly false conclusions Students then analyze problems to correct the errors Covers arithmetic algebra geometry trigonometry and approximate computations 1963 edition
