Muralidhar, Gautam Biswas, 2005 Fluid mechanics continues to dominate the world of engineering This book bridges the gap between first and higher level text books on the subject It shows that the approximate approaches are essentially globally

averaged versions of the local treatment that in turn is covered in considerable detail in the second edition Optimization Techniques and Associated Applications Sandeep Singh,Sandeep Dalal,2024-11-13 Currently the techniques of operation research are widely used in every aspect of day to day life This book discusses a variety of problems that arise in various businesses and develops mathematical theories as well as technology answers to solve them from an industry perspective Optimization Techniques and Associated Applications incorporates cutting edge methods for locating early workable answers to an optimization challenge and acts as a road map for creating a catastrophe management paradigm that is sustainable This book offers numerical methods for resolving mathematical issues that can be found in numerous sectors and includes specific case studies of actual industrial optimization applications The uncertainty that arises in various businesses is explored and new and recently developed techniques are discussed Because this book primarily focuses on operations research and solutions to the challenges across a variety of disciplines the audience is expansive and can include professionals students and researchers from mathematics as well as engineers from industrial engineering computer science information technology mechanical civil electrical petroleum chemical aerospace aviation meteorology disaster management and other departments **Numerical Methods for Roots of Polynomials - Part II** J.M. McNamee,V.Y. Pan,2013-07-19 We discuss the secant method where are initial guesses In the Regula Falsi variation we start with initial guesses and such that after an iteration similar to the above we replace either a or b by the new value depending on which of or has the same sign as Often one of the points gets stuck and several variants such as the Illinois or Pegasus methods and variations are used to unstick it We discuss convergence and efficiency of most of the methods considered We treat methods involving quadratic of higher order interpolation and rational approximation We also discuss the bisection method where again and we set We replace a or b by c according to the sign of as in the Regula Falsi method Various generalizations are described including some for complex roots Finally we consider hybrid methods involving two or more of the previously described methods *Recent Advances in Material, Manufacturing, and Machine Learning* Bjorn Schuller,Rajeev Gupta,Rakesh Mote,Abhishek Sharma,J.P. Giri,R.B. Chadge,2024-06-17 The main aim of the 2nd international conference on recent advances in materials manufacturing and machine learning processes 2023 RAMMML 23 is to bring together all interested academic researchers scientists engineers and technocrats and provide a platform for continuous improvement of manufacturing machine learning design and materials engineering research RAMMML 2023 received an overwhelming response with more than 530 full paper submissions After due and careful scrutiny about 120 of them have been selected for presentation The papers submitted have been reviewed by experts from renowned institutions and subsequently the authors have revised the papers duly incorporating the suggestions of the reviewers This has led to significant improvement in the quality of the contributions Taylor Francis publications CRC Press have agreed to publish the selected proceedings of the conference in their book series of Advances in Mechanical Engineering and Interdisciplinary Sciences This enables fast
