Perspectives and Trends in Education and Technology Anabela Mesquita, António Abreu, João Vidal Carvalho, Cleuciliz Santana, Cristina Helena Pinto de Mello, 2023-10-21 This book presents high quality peer reviewed papers from the International Conference in Information Technology Education ICITED 2023 to be held at the Nilton Lins University Manaus Brazil during June 29 30 2023 The book covers a specific field of knowledge This intends to cover not only two fields of knowledge Education and Technology but also the interaction among them and the impact result in the job market and organizations It covers the research and pedagogic component of Education and Information Technologies but also the connection with Society addressing the three pillars of higher education The book addresses impact of pandemic on education and use of technology in education Finally it also encourages companies to present their professional cases which will be discussed These can constitute real examples of how companies are overcoming their challenges with the uncertainty of the market Matlab® for Engineers Holly Moore, 2023 This book grew out of my experience teaching MATLAB and other computing languages to freshmen engineering students at Salt Lake Community College I was frustrated by the lack of a text that started at the beginning Although there were many comprehensive reference books they assumed a level of both mathematical and computer sophistication that my students did not possess Also because MATLAB was originally adopted by practitioners in the fields of signal processing and electrical engineering most of these texts provided examples primarily from those areas an approach that didn't fit with a general engineering curriculum This text starts with basic algebra and shows how MATLAB can be used to solve engineering problems from a wide range of disciplines The examples are drawn from concepts introduced in early chemistry and physics classes and freshman and sophomore engineering classes A standard problem

solving methodology is used consistently The text assumes that the student has a basic understanding of college algebra and has been introduced to trigonometric concepts students who are mathematically more advanced generally progress through the material more rapidly Although the text is not intended to teach subjects such as statistics or matrix algebra when the MATLAB techniques related to these subjects are introduced a brief background is included In addition sections describing MATLAB techniques for solving problems by means of calculus and differential equations are introduced near the end of appropriate chapters These sections can be assigned for additional study to students with a more advanced mathematics background or they may be useful as reference material as students progress through an engineering curriculum
