Ostrowski, 2016-06-03 Solution of Equations and Systems of Equations Second Edition deals with the Laguerre iteration interpolating polynomials method of steepest descent and the theory of divided differences The book reviews the formula for confluent divided differences Newton's interpolation formula general interpolation problems and the triangular schemes for computing divided differences The text explains the method of False Position Regula Falsi and cites examples of computation using the Regula Falsi The book discusses iterations by monotonic iterating functions and analyzes the connection of the Regula Falsi with the theory of iteration The text also explains the idea of the Newton Raphson method and compares it with the Regula Falsi The book also cites asymptotic behavior of errors in the Regula Falsi iteration as well as the theorem on the error of the Taylor approximation to the root The method of steepest descent or gradient method proposed by Cauchy ensures global convergence in very general conditions This book is suitable for mathematicians students and professor of calculus and advanced mathematics

Jordan Canonical Form Steven H. Weintraub, 2008-09-08 Jordan Canonical Form JCF is one of the most important and useful

concepts in linear algebra In this book we develop JCF and show how to apply it to solving systems of differential equations We first develop JCF including the concepts involved in it eigenvalues eigenvectors and chains of generalized eigenvectors We begin with the diagonalizable case and then proceed to the general case but we do not present a complete proof Indeed our interest here is not in JCF per se but in one of its important applications We devote the bulk of our attention in this book to showing how to apply JCF to solve systems of constant coefficient first order differential equations where it is a very effective tool We cover all situations homogeneous and inhomogeneous systems real and complex eigenvalues We also treat the closely related topic of the matrix exponential Our discussion is mostly confined to the 2 by 2 and 3 by 3 cases and we present a wealth of examples that illustrate all the possibilities in these cases and of course exercises for the reader Table of Contents Jordan Canonical Form Solving Systems of Linear Differential Equations Background Results Bases Coordinates and Matrices Properties of the Complex Exponential

Equations and Inequalities Jiri Herman,Radan Kucera,Jaromir Simsa,2000-03-23 A look at solving problems in three areas of classical elementary mathematics equations and systems of equations of various kinds algebraic inequalities and elementary number theory in particular divisibility and diophantine equations In each topic brief theoretical discussions are followed by carefully worked out examples of increasing difficulty and by exercises which range from routine to rather more challenging problems While it emphasizes some methods that are not usually covered in beginning university courses the book nevertheless teaches techniques and skills which are useful beyond the specific topics covered here With approximately 330 examples and 760 exercises
