Mechanical Engineering Drawing Tutorial:

Technical Drawing 101 with AutoCAD 2020 Ashleigh Fuller, Antonio Ramirez, Douglas Smith, 2019-06 Technical Drawing 101 covers topics ranging from the most basic such as making freehand multiview sketches of machine parts to the advanced creating an AutoCAD dimension style containing the style settings defined by the ASME Y14.5 2009 Dimensioning and Tolerancing standard. But unlike the massive technical drawing reference texts on the market, Technical Drawing 101 aims to present just the right mix of information and projects that can be reasonably covered by faculty and assimilated by students in one semester. Both mechanical and architectural projects are introduced to capture the interest of more students and to offer a broader appeal. The authors have also created extensive video training: 120 videos, 17 hours total, that is included with every copy of the book. In these videos, the authors start off by getting students comfortable with the user interface and demonstrating how to use many of AutoCAD's commands and features. The videos progress to more advanced topics where the authors walk students through completing several of the projects in the book. The CAD portion of the text incorporates drafting theory whenever possible and covers the basics of drawing setup, units, limits, and layers, the tools of the Draw, Modify, and Dimension toolbars, and the fundamentals of 3D modeling. By focusing on the fundamental building blocks of CAD, Technical Drawing 101 provides a solid foundation for students going on to learn advanced CAD concepts and techniques: paper space, viewports, xrefs, annotative scaling, etc. In intermediate CAD courses. In recognition of the diverse career interests of our students, Technical Drawing 101 includes projects in which students create working drawings for a mechanical assembly as well as for an architectural project. We include architectural drawing because our experience has shown that many, if not most, first semester drafting students are interested in careers in the architectural design field and that a traditional technical drawing text which focuses solely on mechanical drawing projects holds little interest for these students. The multidisciplinary approach of this text and its supporting materials are intended to broaden the appeal of the curriculum and increase student interest, and it is hoped, future enrollments.

Graphics Recognition. Recent Advances Atul K. Chhabra, Dov Dori, 2003-06-29. This edited volume contains refereed and improved versions of select papers that were presented at the third IAPR Workshop on Graphics Recognition (GREC 99) held at Rambagh Palace in Jaipur, India, 26-27 September 1999. The workshop was organized by the TC10 Technical Committee on Graphics Recognition of the IAPR. Edited volumes from the previous two workshops in this series are also available as Lecture Notes in Computer Science volumes 1072 and 1389. Graphics recognition is the study of techniques for computer interpretation of images of line drawings and symbols. This includes methods such as vectorization, symbol recognition, and table and chart recognition for applications such as engineering drawings, schematics, logic drawings, maps, diagrams, and musical scores. Some recently developed techniques include graphics-based information or drawing retrieval and recognition of online graphical strokes. With the recent advances in the field, there is now a need to develop benchmarks for evaluating and comparing algorithms and systems. Graphics recognition is a growing field of interest in the broader document image recognition community. The GREC 99 workshop was

attended by fifty people from fifteen countries. The workshop program consisted of six technical sessions. Each session began with a half hour invited talk which was followed by several short talks. Each session closed with a half hour panel discussion where the authors fielded questions from the other participants. Several interesting new research directions were discussed at the workshop.
