Handbook of Mathematics for Engineers and Scientists Andrei D. Polyanin, Alexander V. Manzhirov, 2006-11-27 Covering the main fields of mathematics this handbook focuses on the methods used for obtaining solutions of various classes of mathematical equations that underlie the mathematical modeling of numerous phenomena and processes in science and technology The authors describe formulas methods equations and solutions that are frequently used in scientific and engineering applications and present classical as well as newer solution methods for various mathematical equations The book supplies numerous examples graphs figures and diagrams and contains many results in tabular form including finite sums and series and exact solutions of differential integral and functional equations

Physically Based Rendering Matt Pharr, Greg Humphreys, 2004-09-28 Rendering is a crucial component of computer graphics the conversion of a description of a 3D scene into an image for display Algorithms for animation geometric modeling and texturing all must feed their results through some sort of rendering process for the results to be visible in an image Focusing on realistic images physically based rendering incorporates ideas from a range of disciplines including physics biology psychology cognitive science and mathematics This book presents the algorithms of modern photorealistic rendering and follows step by step the creation of a complete rendering system As each new rendering concept is introduced it is also shown implemented in code there is no better way to understand the subtle and complex process of rendering The code itself is highly readable written in the literate programming style that mixes text describing the system with the code that implements it The result is a stunning achievement in graphics education for students professionals and researchers CD ROM with the source code for a complete rendering system for Windows OS X Linux with many examples of images created by the system throughout the 4 color text The code and text are tightly woven together through the technique of literate programming with a unique indexing feature that lists all locations of functions variables and methods on the page they are first described The most complete guide to understanding designing and building a rendering system
