David Nightingale,2010-04-30 Suitable for a one semester course in general relativity for senior undergraduates or beginning graduate students this text clarifies the mathematical aspects of Einstein s theory of relativity without sacrificing physical understanding The text begins with an exposition of those aspects of tensor calculus and differential geometry needed for a proper treatment of the subject The discussion then turns to the spacetime of general relativity and to geodesic motion A brief consideration of the field equations is followed by a discussion of physics in the vicinity of massive objects including an elementary treatment of black holes and rotating objects The main text concludes with introductory chapters on gravitational radiation and cosmology This new third edition has been updated to take account of fresh observational evidence and experiments It includes new sections on the Kerr solution in Chapter 4 and cosmological speeds of recession in Chapter 6 A more mathematical treatment of tensors and manifolds included in the 1st edition but omitted in the 2nd edition has been restored in an appendix Also included are two additional appendixes Special Relativity Review and The Chinese Connection and outline solutions to all exercises and problems making it especially suitable for private study **Combined Membership List of the American Mathematical Society and the Mathematical Association of America** American Mathematical Society,1978 **Subject Guide to Children's Books in Print 1997** Bowker Editorial Staff,R R Bowker Publishing,1996-09 El-Hi Textbooks and Serials in Print ,1985 **Books in Print Supplement** ,2002 Subject Guide to Books in Print ,1997 *American Book Publishing Record* ,1978 **Combined Membership List** American Mathematical Society,1976 Lists for 19 include the Mathematical Association of America and 1955 also the Society for Industrial and Applied Mathematics **Quasi-Newton Methods for Nonlinear Programming** Jason Dean Hibbeler,University of Illinois at Urbana-Champaign. Department of Computer Science,1997 Abstract In this thesis we examine nonlinear programming from the standpoint of nonlinear equations We consider Newton and quasi Newton algorithms for solving underdetermined nonlinear systems and then show how these techniques can be applied in the setting of constrained optimization We produce new perturbation analyses for the special symmetric block system resulting from a standard solution method in nonlinear programming Using the steepest descent method for unconstrained optimization we develop a new iteration for the constrained case We give a convergence analysis for this new method and illustrate its behavior with numerical examples Finally we propose a new class of symmetric updates for use in a quasi Newton method for nonlinear programming We show how these updates model the underlying nonlinear equation better than the standard symmetric updates and also how they require less overall work for large problems *Scientific and Technical Books and Serials in Print* ,1984 *Calculus* M.
