started with the basics such as how to easily find sequence information and then analyze it. In further chapters the authors go into the various analysis options from RNA, DNA and proteins to entire metabolic pathways. Exciting examples from biology are chosen in each chapter to illustrate the analysis. Each chapter concludes with an exercise section that immediately puts what has been learned to use. The subject of this book is a must for any biology student, whether undergraduate or graduate, as bioinformatics is now unearthing amazing insights into the molecular basis of all living things. Computer science students and other students from related sciences will get a good introduction to bioinformatics as biology and current topics, e.g. AI, are systematically introduced step by step alongside the software. Discover the key to life together with the authors and learn to understand the language of life. This book is a translation of the original German 2nd edition *Bioinformatik* by Thomas Dandekar and Meik Kunz, published by Springer Verlag GmbH, Germany, part of Springer Nature in 2021. The translation was done with the help of artificial intelligence machine translation by the service DeepL.com. A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

ESL Readers and Writers in Higher Education Norman W. Evans, Neil J. Anderson, William G. Eggington, 2015-06-12. *ESL Readers and Writers in Higher Education* describes the challenges ESL students in U.S. postsecondary institutions face when studying in a second language and offers suggestions for how teachers, advisors, tutors, and institutions might provide support that meets the reading and writing needs of this very important student population. Because the ESL profession as a whole, including what professionals are doing in the classroom, sits under the umbrella of an institutional response to a language-related challenge, some solutions aimed at helping students achieve optimal proficiency lie outside of the classroom. As such, this book is based on the assertion that language development support is not the sole responsibility of language teachers. Everyone on campuses that hosts ESL students bears some responsibility for these students' language development. Chapters are therefore intentionally adapted to appeal to a wide variety of readers, from classroom teachers and teachers in training to admissions officers, academic advisors, and international student advisors.

Appetite in patients with heart failure Christina Andrae, 2018-03-14. **Background:** Appetite is an important component in nutrition for maintaining the food intake needed by the body. Decreased appetite is a common clinical problem in patients with heart failure. It has a negative impact on food intake and possibly on malnutrition and health outcomes. There is a lack of evidence on how to assess appetite in heart failure. Furthermore, there are knowledge gaps about factors associated with appetite and which role appetite plays for health status in heart failure. **Aim:** The overall aim of the thesis was to investigate appetite in patients with heart failure. Four studies were conducted with the goal to evaluate the psychometric properties of the Council on Nutrition Appetite Questionnaire (CNAQ) I and to explore the prevalence of decreased appetite and related factors associated with appetite in patients with heart failure. **II-IV Methods:** A multicenter study was conducted in three

outpatient heart failure clinics in the center of Sweden during 2009-2012. Data were collected through a baseline measurement (I, IV) and an 18-month follow-up (IV). The first study was a psychometric evaluation study (I) while the other studies had an observational cross-sectional design (II, III) and an observational prospective design (IV). One hundred and eighty-six patients diagnosed with heart failure and experiencing heart failure symptoms participated at baseline. At the 18-month follow-up study (IV), one hundred and sixteen participants from the baseline participated. Data were collected from medical records, pharmacological treatment, comorbidity, left ventricle ejection fraction, time of diagnosis, self-reported questionnaires, demographic background data, appetite, symptoms of depression, health status, sleep, self-reported physical activity, objective measurements, anthropometric assessment of body size, blood samples, six-minute walk test, and physical activity measured with an actigraph and clinical assessment. New York Heart Association (NYHA) functional classification and cognitive assessment. The main outcome variables included appetite (I, II, and IV) and health status (III). Descriptive and inferential statistics were used in the studies (I, IV). Results: The majority of the participants had moderate heart failure symptoms (i.e., NYHA class II, $n = 114$, 61%). Most of the participants were men ($n = 130$, 70%). Mean age was 70.7 years (SD 11.0) and mean BMI was 28.7 (SD 5.3). The CNAQ showed acceptable psychometric properties for assessing appetite in patients with heart failure (I). This thesis shows that 38% of the participants experienced an appetite level that put them at risk of weight loss (I). It was shown that factors such as biological, medical, psychological (II), and physical activity/exercise capacity (IV) are associated with appetite. Also, appetite was associated with impaired health status. However, this association was found to be moderated by symptoms of depression (III). Neither appetite nor physical activity changed during the 18-month follow-up (IV). Conclusion: Decreased appetite is a serious phenomenon that needs attention in the care of patients with heart failure. Health care professionals can now use a validated and simple appetite instrument to assess appetite in heart failure. In addition, attention should be paid to elderly patients and those who have symptoms of depression, sleep problems, impaired cognitive function, and impaired physical activity, as well as to patients on suboptimal medical treatment. Higher appetite was shown to contribute to a better health status, but this was only evident in patients without symptoms of depression. Therefore, special attention should be paid to symptoms of depression as this risk factor affected the association between appetite and health status. This thesis enhances the understanding of the magnitude of the problem with decreased appetite in heart failure, both in numbers and factors. New priorities in nutrition care and new ideas can be established both in practice and in research in order to improve a nutrition care that is vital for patients with heart failure.
