Equal parts scientist and public personality, Carl Sagan was one of the most well known figures of the 20th century. As an adviser to NASA, he helped plan the first moon landing. As an activist, he warned of the dangers of nuclear war. And through his writings and television show, Sagan nurtured the scientific curiosity of audiences around the world, encouraging even the non scientifically inclined to understand the possibilities that lay in the cosmos and beyond. The remarkable life of the multi talented Sagan is chronicled within these pages, which survey his personal and professional challenges and his greatest successes. **Carl Sagan** William Poundstone, 2000-10-01

In this compelling life of Carl Sagan, award winning science writer William Poundstone details the transformation of a bookish young astronomer obsessed with life on other worlds into science's first authentic media superstar. The instantly recognizable Sagan, a fixture on television and a bestselling author, offered the layperson entry into the mysteries of the cosmos and of science in general. To much of the scientific community, however, he was a pariah, a brazen publicity seeker who cared more about his image and his fortune than the advancement of science. Poundstone reveals the seldom discussed aspects of Sagan's life: the legitimate and important work of his early scientific career; the almost obsessive capacity to take on endless projects; and the multiple marriages and fractured personal life in what *The New Yorker* called an evenhanded guide to a great man's career.
