portfolio theory from its modern origins through more sophisticated postmodern incarnations evaluates portfolio risk according to the first four moments of any statistical distribution mean variance skewness and excess kurtosis In pursuit of financial models that more accurately describe abnormal markets and investor psychology this book bifurcates beta on either side of mean returns It then evaluates this traditional risk measure according to its relative volatility and correlation components After specifying a four moment capital asset pricing model this book devotes special attention to measures of market risk in global banking regulation Despite the deficiencies of modern portfolio theory contemporary finance continues to rest on mean variance optimization and the two moment capital asset pricing model The term postmodern portfolio theory captures many of the advances in financial learning since the original articulation of modern portfolio theory A comprehensive approach to financial risk management must address all aspects of portfolio theory from the beautiful symmetries of modern portfolio theory to the disturbing behavioral insights and the vastly expanded mathematical arsenal of the postmodern critique Mastery of postmodern portfolio theory's quantitative tools and behavioral insights holds the key to the efficient frontier of risk management Strategic and Tactical Asset Allocation Henrik Lumholdt, 2018-07-21 This book covers each step in the asset allocation process addressing as many of the relevant questions as possible along the way How can we

formulate expectations about long term returns How relevant are valuations What are the challenges to optimizing the portfolio Can factor investing add value and if so how can it be implemented Which are the key performance drivers for each asset class and what determines how they are correlated How can we apply insights about the business cycle to tactical asset allocation The book is aimed at finance professionals and others looking for a coherent framework for decision making in asset allocation both at the strategic and tactical level It stresses analysis rather than pre conceived ideas about investments and it draws on both empirical research and practical experience to give the reader as strong a background as possible
