CADCAM Chris McMahon, Jimmie Browne, 1998 McMahon and Browne explore the processes of defining a product design using CAD/CAM developing manufacturing plans and instructions for the product and the management of the manufacturing system itself **CAD-CAM** McMahon C., Jimmie Browne, 1999-04-01 *Manufacturing Technology* Helmi A. Youssef, Hassan A. El-Hofy, Mahmoud H. Ahmed, 2023-08-17 This new edition textbook provides comprehensive knowledge and insight into various aspects of manufacturing technology processes materials tooling and equipment Its main objective is to introduce the grand spectrum of manufacturing technology to individuals who will be involved in the design and manufacturing of finished products and to provide them with basic information on manufacturing technologies Manufacturing Technology Materials Processes and Equipment Second Edition is written in a descriptive manner where the emphasis is on the fundamentals of the process its capabilities typical applications advantages and limitations Mathematical modeling and equations are used only when they enhance the basic understanding of the material dealt with The book is a fundamental textbook that covers all the manufacturing processes materials and equipment used to convert the raw materials to a final product It presents the materials used in manufacturing processes and covers the heat treatment processes smelting of metals and other technological processes such as casting forming powder metallurgy joining processes and surface technology Manufacturing processes for polymers ceramics and composites are also covered The book also covers surface technology fundamentals of traditional and nontraditional machining processes numerical control of machine tools industrial robots and hexapods additive manufacturing and industry 4.0 technologies The book is written specifically for undergraduates in industrial manufacturing mechanical and materials engineering disciplines of the second to fourth levels to cover complete courses of manufacturing technology taught in engineering colleges and institutions all over the world It also covers the needs of production and manufacturing engineers and technologists participating in related industries where it is expected to be part of their professional library Additionally the book can be used by students in other disciplines concerned with design and manufacturing such as automotive and aerospace engineering **The Design Guidelines Collaborative Framework** Stefano Filippi, Ilaria Cristofolini, 2009-12-04 In the industrial design and engineering field product lifecycle product development design process Design for X etc constitute only a small sample of terms related to the generation of quality products Current best practices cover widely different knowledge domains in trying to exploit them to the best advantage individually and in synergy Moreover standards become increasingly more helpful in interfacing these domains and they are enlarging their coverage by going beyond the single domain boundary to connect closely different aspects of the product lifecycle The degree of complexity of each domain makes impossible the presence of multipurpose competencies and skills there is almost always the need for interacting and integrating people and resources in some effective way These are the best conditions for the birth of theories methodologies models architectures systems procedures

algorithms software packages etc in order to help in some way the synergic work of all the actors involved in the product lifecycle This brief introduction contains all the main themes developed in this book starting from the analysis of the design and engineering scenarios to arrive at the development and adoption of a framework for product design and process reconfiguration In fact the core consists of the description of the Design GuideLines Collaborative Framework DGLs CF a methodological approach that generates a collaborative environment where designers manufacturers and inspectors can find the right and effective meeting point to share their knowledge and skills in order to contribute to the optimum generation of quality products
