Simons, 2020-11-12 The author of *Boeing 707 Group A History* delivers a stunning study in early French aviation design with a plethora of aircraft IPMS USA France has been called the cradle of aviation by many a fact that cannot be disputed although some have tried By the end of the 19th century she led the world in lighter than air flight Any concern about heavier than air flight was dismissed as inevitable and France would achieve it in due course France was also the first nation to stage air exhibitions Unlike their counterparts in Britain Germany and America French designers were thoroughly entrepreneurial and tried a wide variety of adventurous styles from pusher to canard and monoplane to biplane In 1909 the first Air Show was held at the Grand Palais in what was to become an enduring tradition Every year the aircraft exhibitions were a massive success It is not surprising that all this derring do all these technological achievements and all this innovation drew reporters and photographers like moths to a flame The men the machines the places and the events all were recorded reported reproduced and then were filed away Hundreds of images appeared in print but thousands were printed up only as contact prints from large format glass negatives and then disappeared into albums to be forgotten about In the mid 1990s the author came across one such treasure trove a number of dust covered albums containing around five hundred images of aircraft airships and expositions it is doubtful if most have appeared in print before so this will probably be the first time the events of these French pioneers have ever been showcased

Striking the Hornets' Nest Geoffrey L Rossano, Thomas Wildenberg, 2015-10-15 *Striking the Hornets Nest* provides the first extensive analysis of the Northern Bombing Group NBG the Navy's most innovative aviation initiative of World War I and one of the world's first dedicated strategic bombing programs Very little has been written about the Navy's aviation activities in World War I and even less on the NBG Standard studies of strategic bombing tend to focus on developments in the Royal Air Force or the U S Army Air Service This work concentrates on the origins of strategic bombing in World War I and the influence this phenomenon had on the Navy's future use of the airplane The NBG program faced enormous logistical and personnel challenges Demands for aircraft facilities and personnel were daunting and shipping shortages added to the seemingly endless delays in implementing the program Despite the impediments the Navy and Marine Corps triumphed over organizational hurdles and established a series of bases and depots in northern France and southern England in the late summer and early fall of 1918 Ironically by the time the Navy was ready to commence bombing missions the German retreat had caused abandonment of the submarine bases the NBG had been created to attack The men involved in this program were pioneers overcoming major obstacles only to find they were no longer needed Though the Navy rapidly abandoned its use of strategic bombing after World War I their brief experimentation directed the future use of aircraft in other branches of the armed forces It is no coincidence that Robert Lovett the young Navy reserve officer who developed much of the NBG program in 1918 spent the entire period of World War II as Assistant Secretary of War for Air where he played a crucial role organizing and equipping the strategic bombing campaign unleashed against Germany and Japan

Rossano and Wildenberg have provided a definitive study of the NGB a subject that has been overlooked for too long

Vincere Federica Fasanotti, 2020-01-15 Vincere presents an overview of the counterinsurgency operations carried out by the Italian Royal Army from 1922 to 1941 in Libya and Ethiopia Based on ten years of study conducted in the Italian archives and on the ground this volume looks at a period when the Italian Royal Army faced significant new challenges in the conduct of war Facing new challenges in an atypical theater of war Italian Royal Army forces learned significant lessons that would shape the conduct of future combat In the period covered in this work Italian Royal Army forces had to adapt to new terrain while modifying their techniques and methods in relation to the local populations and the overall characteristics of the territories in Africa Moving away from a reliance on heavy slow battalions formed for the most part by Italian troops the Italians instead turned to mobile units lightly armed and composed primarily by African troops who were able to respond quickly to the needs of this kind of war Men coming from the loyal Eritrean colony from Somalia Libya from the countries on the Red Sea and even from Ethiopia progressively replaced Italian troops In Libya warfighting and counterinsurgency operations were conducted mainly by regular infantry Libyan battalions Mharists Saharian and cavalry units Savaris and Spahis while in Ethiopia regular and irregular bands were used Vincere offers a look at some of the earliest irregular warfare and counterinsurgency operations the modern Italian forces ever conducted Italian forces faced local populations while conducting counterinsurgency COIN operations in what was for them a new theater of war In Libya the rebellion was quelled in the space of ten years at an admittedly high price for the regional forces In Ethiopia where COIN operations were interrupted by World War II the available data suggests that military actions accompanied by a more responsible policy toward the population would have eventually defeated the insurgency The use of airpower in Ethiopia made a huge difference and its lessons were learned long before the French experience in Algeria The Italians waged counterinsurgency operations over twenty years in two geographically separate theaters and in two very different operational environments and much of value for current practitioners and scholars can be learned from these different experiences **Austro-Hungarian**

Battleships 1914-18 Ryan K. Noppen, 2012-09-20 The primary purpose of Austria Hungary's navy until the beginning of the twentieth century was the defense of its coastline As its merchant marine dramatically grew admirals believed that the navy should take a more proactive policy of defense The 1890s saw the beginning of a series of naval building programs that would create a well balanced modern fleet including a force of modern battleships In this illustrated history Ryan Noppen examines how these ships came to be and the difficulties experienced in battleship funding and construction mirrored the political difficulties and ethnic rivalries within the empire This book details the five classes of Austro-Hungarian battleships in service during World War I
