orientations of individuals interact The author's detailed assessment is based on a comparison of the structural contexts work orientations and employment histories of nurses and ICT technicians in Germany and the UK These two core service occupations as well as the national contexts of the two European nations have quite different working environments and vocational traditions Nursing is an institutionalized semi profession with clear criteria of qualification and career continuity while information and communication technology ICT is a new evolving field with varied skill backgrounds and high job mobility To arrive at an understanding of how individual career trajectories are changing this book closely examines the interplay of labour market demands employees work and career orientations and the development of their skills It records the ways in which employees adapt to increased labour market flexibility which on the one hand induces discontinuities of careers employment and work and on the other generates new skill requirements and learning expectations as well as unforeseen opportunities
