Species Interactions Worksheet

Use the symbols below to describe the effects on each organism in the type of species interaction.

+ (organism benefits) - (organism is harmed) 0 (organism not harmed/benefited)

	Interaction	Organism #1	Organism #2
1.	Parasitism	+	-
2.	Predation	+	-
3.	Competition	+	+/- /0
4.	Mutualism	+	+
5.	Commensalism	+	0

6. How can two individuals compete without ever coming in contact with each other?
Species can compete even if they never come into direct contact with each other. For example, suppose that one insect feeds on a certain plant during the day and that another species feeds on the same plant during the night.
7. What are some things that make up your niche?
Some descriptions of the organism's life history, habitat, and place in the food chain. According to the competitive exclusion principle, no two species can occupy the same niche in the same environment for a long time.

Determine whether each scenario describes a case of parasitism, predation, mutualism, or commensalism. In **COMPLETE SENTENCES**, explain the reasoning behind each choice.

8. The shrimp is immune to the stinging tentacles of the sea anemone. By hiding in the sea anemone, the shrimp is protected from predators.

Interaction: commensalism
shrimp gets protection from predators
sea anemone not affect by shrimp

9. As they graze, cattle stir up insects, which are eaten by the cattle egrets.

Interaction: commensalism
cattle gets fed
Egrets gets fed

Nuclear Science Abstracts, 1972 *Nature-Based Solutions to 21st Century Challenges* Robert C. Brears, 2020-03-24
This book provides a systematic review of nature based solutions and their potential to address current environmental challenges. In the 21st century society is faced by rapid urbanisation and population growth degradation and loss of natural capital and associated ecosystem services an increase in natural disaster risks and climate change. With growing recognition of the need to work with ecosystems to resolve these issues there is now a move towards nature based solutions which involve utilising nature's ecosystem to solve societal challenges while providing multiple co benefits. This book systematically reviews nature based solutions from a public policy angle assessing policy developments which encourage the implementation of nature based solutions to address societal challenges while simultaneously providing human well being and biodiversity benefits. This includes enhancing sustainable urbanisation restoring degraded ecosystems mitigating and adapting to climate change and reducing risks from natural disasters. While nature based solutions can be applied strategically and equitably to help societies address a variety of climatic and non climatic challenges there is still a lack of understanding on how best to implement them. The book concludes by providing a best practice guide for those aiming to turn societal challenges into opportunities. This book will be of great interest to policymakers practitioners and researchers involved in nature based solutions sustainable urban planning environmental management and sustainable development generally.

How Species Interact Roger Arditi, Lev R. Ginzburg, 2012-04-08
Understanding the functioning of ecosystems requires the understanding of the interactions between consumer species and their resources. How do these interactions affect the variations of population abundances? How do population abundances determine the impact of predators on their prey? The view defended in this book is that the null model that most ecologists tend to use is inappropriate because it assumes that the amount of prey consumed by each predator is insensitive to the number of conspecifics. The authors argue that the amount of prey available per predator rather than the absolute abundance of prey is the basic determinant of the dynamics of predation. This so called ratio dependence is shown to be a much more reasonable null model.

Solution Thermodynamics and its Application to Aqueous Solutions Yoshikata Koga, 2007-11-12 As the title suggests we introduce a novel differential approach to solution thermodynamics and use it for the study of aqueous solutions We evaluate the quantities of higher order derivative than the normal thermodynamic functions We allow these higher derivative data speak for themselves without resorting to any model system We thus elucidate the molecular processes in solution referred to in this book mixing scheme to the depth equal to if not deeper than that gained by spectroscopic and other methods We show that there are three composition regions in aqueous solutions of non electrolytes each of which has a qualitatively distinct mixing scheme The boundary between the adjacent regions is associated with an anomaly in the third derivatives of G The loci of the anomalies in the temperature composition field form the line sometimes referred as Koga line We then take advantage of the anomaly of a third derivative quantity of 1 propanol in the ternary aqueous solution 1 propanol sample species H_2O We use its induced change as a probe of the effect of a sample species on H_2O In this way we clarified what a hydrophobe or a hydrophile and in turn an amphiphile does to H_2O We also apply the same methodology to ions that have been ranked by the Hofmeister series We show that the kosmotropes salting out or stabilizing agents are either hydrophobes or hydration centres and that chaotropes salting in or destabilizing agents are hydrophiles A new differential approach to solution thermodynamics A particularly clear elucidation of the mixing schemes in aqueous solutions A clear understandings on the effects of hydrophobes hydrophiles and amphiphiles to H_2O A clear understandings on the effects of ions on H_2O in relation to the Hofmeister effect A new differential approach to studies in multi component aqueous solutions
