FPGA Implementations of Neural Networks Amos R. Omondi,Jagath C. Rajapakse,2006-10-04 During the 1980s and early 1990s there was signi cant work in the design and implementation of hardware neurocomputers Nevertheless most of these efforts may be judged to have been unsuccessful at no time have have ha ware neurocomputers been in wide use This lack of success may be largely attributed to the fact that earlier work was almost entirely aimed at developing custom neurocomputers based on ASIC technology but for such niche eas this technology was never suf ciently developed or competitive enough to justify large scale adoption On the other hand gate arrays of the period m tioned were never large enough nor fast enough for serious arti cial neur network ANN applications But technology has now improved the capacity and performance of current FPGAs are such that they present a much more realistic alternative Consequently neurocomputers based on FPGAs are now a much more practical proposition than they have been in the past This book summarizes some work towards this goal and consists of 12 papers that were selected after review from a number of submissions The book is nominally divided into three parts Chapters 1 through 4 deal with foundational issues Chapters 5 through 11 deal with a variety of implementations and Chapter 12 looks at the lessons learned from a large scale project and also reconsiders design issues in light of current and future technology

Learning on Silicon G. Cauwenberghs,Magdy Bayoumi,1999-06-30 Learning on Silicon combines models of adaptive information processing in the brain with advances in microelectronics technology and circuit design The premise is to construct integrated systems not only loaded with sufficient computational power to handle demanding signal processing tasks in sensory perception and pattern recognition but also capable of operating autonomously and robustly in unpredictable environments through mechanisms of adaptation and learning This edited volume covers the spectrum of Learning on Silicon in five parts adaptive sensory systems neuromorphic learning learning architectures learning dynamics and learning systems The 18 chapters are documented with examples of fabricated systems experimental results from silicon and integrated applications ranging from adaptive optics to biomedical instrumentation As the first comprehensive treatment on the subject Learning on Silicon serves as a reference for beginners and experienced researchers alike It provides

excellent material for an advanced course and a source of inspiration for continued research towards building intelligent adaptive machines
