Rountree,Michael J. Demetsky,2004 The lack of security screening and screening guidelines of cargo traveling by both passenger and all cargo aircraft is the driving purpose

behind this research project the development of a framework that may be used by individual airports or airlines to analyze various security setups for screening outbound air cargo within an on airport cargo facility This was accomplished through airport surveys a case study at an air cargo facility and computer simulations testing various setups of security technologies to screen cargo within a facility Data collected from surveys sent to over 100 of the nation s major airports revealed the lack of security in the air cargo environment and validated the need for this research Information was obtained on security measures utilized for cargo and personnel as well as the frequency of cargo screenings and information on the size and setups of cargo facilities Also a results comparison between large and small airports was conducted A case study was performed at a cargo facility within a major U S airport in order to gather data pertinent to the simulations used to test the security setups Information gathered on truck arrivals the number of flight destinations security measures in place as well as the general facility setup was used to form the basis of the simulations Further research is needed on the effectiveness of many security technologies With this information government and aviation officials will be able to use this framework as a step toward achieving a well rounded plan for ensuring the safety and security of our nation s air cargo **Maritime**
