Multisensor Data Fusion and Machine Learning for Environmental Remote Sensing Ni-Bin Chang,Kaixu Bai,2018-02-21

In the last few years the scientific community has realized that obtaining a better understanding of interactions between natural systems and the man made environment across different scales demands more research efforts in remote sensing An integrated Earth system observatory that merges surface based air borne space borne and even underground sensors with comprehensive and predictive capabilities indicates promise for revolutionizing the study of global water energy and carbon cycles as well as land use and land cover changes The aim of this book is to present a suite of relevant concepts tools and methods of integrated multisensor data fusion and machine learning technologies to promote environmental sustainability The process of machine learning for intelligent feature extraction consists of regular deep and fast learning algorithms The niche for integrating data fusion and machine learning for remote sensing rests upon the creation of a new scientific architecture in remote sensing science that is designed to support numerical as well as symbolic feature extraction managed by several cognitively oriented machine learning tasks at finer scales By grouping a suite of satellites with similar nature in platform design data merging may come to help for cloudy pixel reconstruction over the space domain or concatenation of time series images over the time domain or even both simultaneously Organized in 5 parts from Fundamental Principles of Remote Sensing Feature Extraction for Remote Sensing Image and Data Fusion for Remote Sensing Integrated Data Merging Data Reconstruction Data Fusion and Machine Learning to Remote Sensing for Environmental Decision Analysis the book will be a useful reference for graduate students academic scholars and working professionals who are involved in the study of Earth systems and the environment for a sustainable future The new knowledge in this book can be applied successfully in many areas of environmental science and engineering **Technology Review** ,1995 **Year Book** Carnegie Institution of Washington,1905 List of the names of persons engaged in the various activities v 10 p 243 257 **Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering** Kim, Dookie,Sekhar Roy, Sanjiban,Länsivaara, Tim,Deo, Ravinesh,Samui, Pijush,2018-06-15 The disciplines of science and engineering rely heavily on the forecasting of prospective constraints for concepts that have not yet been proven to exist especially in areas such as artificial intelligence Obtaining quality solutions to the problems presented becomes increasingly difficult due to the number of steps required to sift through the possible solutions and the ability to solve such problems relies on the recognition of patterns and the categorization of data into specific sets Predictive modeling and optimization methods allow unknown events to be categorized based on statistics and classifiers input by researchers The Handbook of Research on Predictive Modeling and Optimization Methods in Science and Engineering is a critical reference source that provides comprehensive information on the use of optimization techniques and predictive models to solve real life engineering and science problems Through discussions on techniques such as robust design optimization water level prediction and the prediction of human
