Abstract. In this paper, the history of secondary school science in Mauritius is examined to identify factors which may have influenced its link to technology of local significance. The economy was based on agriculture. Sugar research was not only well developed, it was crucial for sustaining the social status of the Franco-Mauritian economic elite. Secondary school science on the other hand was unaffected by the locally conducted scientific and technical research. It prepared students for examinations of British examination boards and for further education in British universities. This resulted in narrowing of the curriculum to the detriment of important but 'non-examinable' components of the syllabus. The 'teaching to test' was further exacerbated by limited educational opportunities at each level. All attempts at introducing agriculture and practical work in the curriculum also failed because of the apathy that descendants of Indian and African immigrants had for agriculture.

Today, there are many educational and vocational opportunities. However, the academic traditions with examinations and subsequent selection on which the education system was founded have become so deep rooted that any deviation from examination requirements is firmly resisted.

1. Introduction

Science subjects have been part of the secondary school curriculum in Mauritius for over one hundred and fifty years during which the status of science subjects changed significantly. Science subjects, which were initially introduced for students who did not have the aptitude for classical subjects now enjoy a 'high status' in the school curriculum. It may appear paradoxical but interestingly throughout these years, there has been a general agreement regarding the importance of science education. Subsequently, reports, plans, proposals of the department/ ministry of education outline strategies for strengthening school science education and relating it to the local needs and technology so that young people develop the '*ability to adapt to the changing needs and new technology*' (Ministry of Education and Science 1994, p.3). Such recommendations are however not new. Even in 1842, the author H.A. while writing about the Royal College of Mauritius, which was the only secondary institution in the island, states that for development it is imperative that science education relates to industries and agriculture.

Enfin, prenant en considération l'état de nos manufactures, de nos usines, et la nécessité de donner à notre agriculture le plus grand développement possible, on devra doter le collège Royal de divers cours où l'on enseignera le chimie et la mécanique appliqué aux arts, la théorie des machines à vapeur, &c. (H. A. 1842, p.10)
