Genome Clustering Alexander Bolshoy, Zeev Volkovich, Valery Kirzhner, Zeev Barzily, 2010-05-19 Knighting in sequence biology Edward N Trifonov Genome classification construction of phylogenetic trees became today a major approach in studying evolutionary relatedness of various species in their vast diversity Although the modern genome clustering delivers the trees which are very similar to those generated by classical means and basic terminology is the same the phenotypic traits and habitats are not anymore the playground for the classification The sequence space is the playground now The phenotypic traits are placed by sequence characteristics words in particular Matter of factually the phenotype and genotype merged to confusion of both classical and modern phylogeneticists Accordingly a completely new vocabulary of stringology information theory and applied mathematics took over And a new brand of scientists emerged those who do know the math and simultaneously do know biology The book is written by the authors of this new brand There is no way to test their literacy in biology as no biologist by training would even try to enter into the elite circle of those who masters their almost occult language But the army of formalicians formal linguists mathematicians humbly or aggressively longing to join modern biology got an excellent introduction to the field of genome clustering written by the team of their kin
