Seismic Data Interpretation and Evaluation for Hydrocarbon Exploration and Production Niranjana C. Nanda, 2021-06-24

This book is meant for geoscientists and engineers who are beginners and introduces them to the field of seismic data interpretation and evaluation. The exquisite seismic illustrations and real case examples interspersed in the text help the readers appreciate the interpretation of seismic data in a simple way and at the same time emphasize the multidisciplinary integrated practical approach to data evaluation. A concerted effort has been made for the readers to realize that mindless interpretation of seismic data using sophisticated software packages without having a grasp on the elementary principles of geology and geophysics and coupled with their over reliance on workstations to provide solutions can have appalling results all too very often.

Remote Sensing for Geophysicists Mukesh

Gupta, 2025-03-05 Geophysical exploration methods are very expensive and invasive methods for surveys. Remote sensing methods are non invasive and much cheaper for investigating the Earth's surface. This book bridges this gap and aims to integrate exploration geophysics with remote sensing as a cost effective method which is easy to implement for prospecting in different areas. It provides exploration geophysicists with the necessary information to use advanced remote sensing technology in the exploration of oil and gas, minerals, and groundwater. It describes the integration of remote sensing in each of the nine exploration methods based on over 11 case studies from different countries across the globe. Features: Describes the geophysical exploration methods that geophysicists frequently use along with suitable remote sensing techniques. Offers

a well structured one stop guide for finding a suitable remote sensing technique for a specific geophysical exploration method Provides case studies on the exploration of oil gas and groundwater with step by step instructions using remote sensing technology Serves as a practical field book for exploration geophysicists who never used or rarely use remote sensing Enables exploration geophysicists to understand and interpret remote sensing data for the assessment of complex explorations This book is an excellent resource for professionals researchers academics and students with a background in remote sensing across many disciplines in Earth sciences such as geology hydrology petrology mining geography geosciences etc
