

...which around the point where it touches the ground. The further away the pole is from the pivot point, the less force is required to produce the same torque (the torque needed to keep the rectangle steady). As a result, Pole 2, which is further from the point of contact with the ground, needs less strain on the rectangle. This is essentially the lever's Law.

The rectangle also exerts less force to Pole 2 according to Newton's 3rd Law.

Therefore, the correct answer is 1.
