

The Signal and the Noise: Why So Many Predictions Fail--but Some Don't

UPDATED FOR 2020 WITH A NEW PREFACE BY NATE SILVER

One of the more momentous books of the decade.

• The New York Times Book Review Nate Silver built an innovative system for predicting baseball performance, predicted the 2008 election within a hair's breadth, and became a national sensation as a blogger• all by the time he was thirty. He solidified his standing as the nation's foremost political forecaster with his near perfect prediction of the 2012 election. • Silver is the founder and editor in chief • of the website FiveThirtyEight. •

• Drawing on his own groundbreaking work, Silver examines the world of prediction, investigating how we can distinguish a true signal from a universe of noisy data. Most predictions fail, often at great cost to society, because most of us have a poor understanding of probability and uncertainty. Both experts and laypeople mistake more confident predictions for more accurate ones. But overconfidence is often the reason for failure. If our appreciation of uncertainty improves, our predictions can get better too. This is the "prediction paradox": The more humility we have about our ability to make predictions, the more successful we can be in planning for the future. In keeping with his own aim to seek truth from data, Silver visits the most successful forecasters in a range of areas, from hurricanes to baseball to global pandemics, from the poker table to the stock market, from Capitol Hill to the NBA. He explains and evaluates how these forecasters think and what bonds they share. What lies behind their success? Are they good• or just lucky? What patterns have they unraveled? And are their forecasts really

Cultures of Prediction Ann Johnson, Johannes Lenhard, 2024-05-07 A probing examination of the dynamic history of predictive methods and values in science and engineering that helps us better understand today's cultures of prediction The ability to make reliable predictions based on robust and replicable methods is a defining feature of the scientific endeavor allowing engineers to determine whether a building will stand up or where a cannonball will strike *Cultures of Prediction* which bridges history and philosophy uncovers the dynamic history of prediction in science and engineering over four centuries Ann Johnson and Johannes Lenhard identify four different cultures or modes of prediction in the history of science and engineering rational empirical iterative numerical and exploratory iterative They show how all four develop together and interact with one another while emphasizing that mathematization is not a single unitary process but one that has taken many forms The story is not one of the triumph of abstract mathematics or technology but of how different modes of prediction complementary

concepts of mathematization and technology coevolved building what the authors call cultures of prediction The first part of the book examines prediction from early modernity up to the computer age The second part probes computer related cultures of prediction which focus on making things and testing their performance often in computer simulations This new orientation challenges basic tenets of the philosophy of science in which scientific theories and models are predominantly seen as explanatory rather than predictive It also influences the types of research projects that scientists and engineers undertake as well as which ones receive support from funding agencies
