Thickening and Gelling Agents for Food Alan P. Imeson, 2012-12-06 The success of the first edition of *Thickening and Gelling Agents for Food* underlined the keen interest in functional food ingredients In this second edition the text has been completely revised and updated to reflect the current market trends New chapters have been included to broaden the scope of materials used by the food technologist Agar and konjac gum flour probably the most traditional gelling and thickening agents but most widely utilised in the Far East have been given greater prominence Microcrystalline cellulose a relatively new food stabiliser used widely in the USA has been included The preparation of traditional products using formulations suited to bulk food processings is described while new areas focus on low fat and low calorie foods where there is an even greater demand for controlling the stability viscosity gelation and mouthfeel using a broad range of thickening and gelling agents Recent legislative changes in the USA and EC impact the use of additives including gellan gum konjac flour carrageenan tara gum and microcrystal line cellulose some changes have increased the number of additives approved for foods while others allow a broader range of materials to be used in foods The detailed information on products properties and applications given in this second edition will enable these highly functional thickening and gelling agents to be used to full advantage

Biomaterials David Byrom, 1991-06-18 Biomaterials are produced from biological material and are used for their physical characteristics This book looks at the range of biomaterials and their applications which range from the use of polysaccharides as thickening agents to the use of proteins as fibres and adhesives

Handbook of Hydrocolloids Glyn O. Phillips, Peter A. Williams, 2009-05-28 Hydrocolloids are among the most widely used ingredients in the food industry They function as thickening and gelling agents texturizers stabilisers and emulsifiers and in addition have application in areas such as edible coatings and flavour release Products reformulated for fat reduction are particularly dependent on hydrocolloids for satisfactory sensory quality They now also find increasing applications in the health area as dietary fibre of low calorific value The first edition of *Handbook of Hydrocolloids* provided professionals in the food industry with relevant practical information about the range of hydrocolloid ingredients readily and at the same time authoritatively It was exceptionally well received and has subsequently been used as the substantive reference on these food ingredients Extensively revised and expanded and containing eight new chapters this major new edition strengthens that reputation Edited by two leading international authorities in the field the second edition reviews over twenty five hydrocolloids covering structure and properties processing functionality applications and regulatory status Since there is now greater emphasis on the protein hydrocolloids new chapters on vegetable proteins and egg protein have been added Coverage of microbial polysaccharides has also been increased and the developing role of the exudate gums recognised with a new chapter on Gum

Ghatti Protein polysaccharide complexes are finding increased application in food products and a new chapter on this topic as been added Two additional chapters reviewing the role of hydrocolloids in emulsification and their role as dietary fibre and subsequent health benefits are also included The second edition of Handbook of hydrocolloids is an essential reference for post graduate students research scientists and food manufacturers Extensively revised and expanded second edition edited by two leading international authorities Provides an introduction to food hydrocolliods considering regulatory aspects and thickening characteristics Comprehensively examines the manufacture structure function and applications of over twenty five hydrocolloids *Food Proteins and Their Applications* Srinivasan Damodaran,2017-10-19 Reviews the physiochemical properties of the main food proteins and explores the interdependency between the structure function relationship of specific protein classes and the processing technologies applied to given foods The book offers solutions to current problems related to the complexity of food composition preparation and storage and includes such topics as foams emulsions gelation by macromolecules hydrolysis microparticles fat replacers protein based edible films and extraction procedures **Food Polysaccharides and Their Applications** Alistair M.
