Harness Production Cables Cable Processing Systems:

Optimal Flow Control in Manufacturing Systems O. Maimon, E. Khmelnitsky, K. Kogan, 2013-03-09 This book presents a unified optimal control approach to a large class of problems arising in the field of production planning and scheduling. It introduces a leading optimal flow control paradigm which results in efficient solutions for planning and scheduling problems. This book also introduces the reader to analytical and numerical methods of the maximum principle used here as a mathematical instrument in modeling and solving production planning and scheduling problems. The book examines control of production flows rather than sequencing of distinct jobs. Methodologically, this paradigm allows us to progress from initial assumptions about a manufacturing environment through mathematical models and construction of numerical methods up to practical applications which prove the relevance of the theory developed here to the real world. Given a manufacturing system, the goal is to control the production subject to given constraints in such a way that the demands are tracked as closely as possible. The book considers a wide variety of problems encountered in actual production planning and scheduling. Among the problems are production flow sequencing and timing, capacity expansion and deterioration, subcontracting and overtime. The last chapter is entirely devoted to applications of the theory to scheduling production flows in real life manufacturing systems. The enclosed disk provides software implementations of the developed methods with easy convenient user interface. We aimed this book at a student audience: final year undergraduates as well as master and Ph D.

Knowledge-Based Process Planning for Construction and Manufacturing Carlos Zozaya-Gorostiza, 2012-12-02 Knowledge Based Process Planning for Construction and Manufacturing describes a knowledge based system architecture that is used to develop process planning systems called PLANEX. This book explains that PLANEX is a domain independent knowledge based process planning system architecture. Starting from a description of the physical artifact to be constructed or manufactured, PLANEX generates the set of activities used to create the artifact. These activities with their required resources are linked into a process planning network which can be used in project scheduling or management. This text also reviews the concepts, requirements, and resulting architecture of PLANEX, including detailed descriptions of applications of the system in construction and manufacturing. This publication is recommended to engineers, architects, and specialists interested in construction and manufacturing process planning.

Advances in Automotive Production Technology - Theory and Application Philipp Weißgraeber, Frieder Heieck, Clemens Ackermann, 2021-06-01 This volume of the series ARENA2036 compiles the outcomes of the first Stuttgart Conference on Automotive Production SCAP2020. It contains peer reviewed contributions from a theoretical as well as practical vantage point and is topically structured according to the following four sections: I Novel Approaches for Efficient Production and Assembly Planning II Smart Production Systems and Data Services III

Advances in Manufacturing Processes and Materials and IV New Concepts for Autonomous Collaborative Intralogistics Given the restrictive circumstances of 2020 the conference was held as a fully digital event divided into two parts It opened with a pre week allowing everyone to peruse the scientific contributions at their own pace followed by a two day live event that enabled experts from the sciences and the industry to engage in various discussions The conference has proven itself as an insightful forum that allowed for an expertly exchange regarding the pivotal Advances in Automotive Production and Technology

Handbook of Flexible Manufacturing Systems Nand K. Jha,2012-12-02 This handbook is a compilation of the current practical knowledge of flexible manufacturing systems FMS FMS allow manufacturing plants of all sizes to reduce their inventory while increasing their ability to meet consumer demands By controlling automatic guided vehicles robots and machine tools with one central computer products can now be produced in a variety of styles and models all at the same time FMS are designed to adapt quickly and economically to changes in requirements and to unpredictable events This guide explains how to effectively employ these useful new systems Includes specifications for software to implement simulation modeling Surveys practical applications in the workplace Presents materials in a step by step workbook style

Feature Based Product Life-Cycle Modelling René Soenen,Gustav J. Olling,2013-04-17 Feature based technology is the key factor towards meeting the increasingly high demands of improving and speeding up the product development process from concept to customer feedback and is therefore expected to be able to provide for a better approach to integrate the complete product design process chain Feature Based Product Life Cycle Modelling is dedicated to exploring the progress towards an integrated solution for the product creation process based on feature technology Hence it encompasses significant phases of the product creation process from conceptual design to recycling including the following topics Life phases modelling Knowledge based engineering Multiple view geometric modelling Technological links among assemblies Manufacturing process cost estimation Manufacturing modelling Machining preparation Product deterioration prediction Product recovery estimation For each topic a state of the art theoretic bases tentative solutions and illustrative examples are detailed demonstrating the successful application of feature technology to the modelling of innovative products and the efficient control of their design
