[Traffic Data Collection and its Standardization](#) Jaume Barceló, Masao Kuwahara, 2010-07-20 A nice night of October 2007 in Beijing during the XV World Conference on ITS a number of colleagues met informally for a dinner party that spontaneously became a vivid discussion on the importance of traffic data for all types of poses Researchers can hardly do any progress in modeling developing and testing theories without suitable data and what practitioners can do in real life is limited not only by technology but also by the availability of the required data Quite frequently the data and not the technologies are what determine how far we can go Any discussion about traffic data leads in a natural way to a discussion on the variety of traffic data sources formats levels of aggregation accuracies and so on Consequently we moved to talk on the initiative that Kuwahara had undertaken in his traffic laboratory at the University of Tokyo known as the International Traffic Data Base and thus smoothly but inexorably we came to agree that it would be convenient to organize a workshop to continue our discussion at a more formal level share our points of view with other colleagues listen what they had to say and if possible disseminate the findings in our professional and academic communities

Mobility Data-Driven Urban Traffic Monitoring Zhidan Liu, Kaishun Wu, 2021-05-18 This book introduces the concepts of mobility data and data driven urban traffic monitoring A typical framework of mobility data based urban traffic monitoring is also presented and it describes the processes of mobility data collection data processing traffic

modelling and some practical issues of applying the models for urban traffic monitoring This book presents three novel mobility data driven urban traffic monitoring approaches First to attack the challenge of mobility data sparsity the authors propose a compressive sensing based urban traffic monitoring approach This solution mines the traffic correlation at the road network scale and exploits the compressive sensing theory to recover traffic conditions of the whole road network from sparse traffic samplings Second the authors have compared the traffic estimation performances between linear and nonlinear traffic correlation models and proposed a dynamical non linear traffic correlation modelling based urban traffic monitoring approach To address the challenge of involved huge computation overheads the approach adapts the traffic modelling and estimations tasks to Apache Spark a popular parallel computing framework Third in addition to mobility data collected by the public transit systems the authors present a crowdsensing based urban traffic monitoring approach The proposal exploits the lightweight mobility data collected from participatory bus riders to recover traffic statuses through careful data processing and analysis Last but not the least the book points out some future research directions which can further improve the accuracy and efficiency of mobility data driven urban traffic monitoring at large scale This book targets researchers computer scientists and engineers who are interested in the research areas of intelligent transportation systems ITS urban computing big data analytic and Internet of Things IoT Advanced level students studying these topics benefit from this book as well

ITS Handbook 2000 PIARC Committee on Intelligent Transport,1999 Combining a comprehensive definition of Intelligent Transport Systems and a full review of experimental implementation of ITS in various countries around the world this new book is an excellent introduction to ITS concepts and implementation for transportation managers planners and designers everywhere as well as a valuable resource for ITS professionals Whether you re planning to convert existing roadway systems into the superhighway of tomorrow or you re charged with creating an entirely new roadway incorporating the best intelligent systems this is an essential guide that helps you understand what technologies are available and what kinds of success others have experienced with ITS already

Introduction to Intelligent Systems in Traffic and Transportation Ana

L.C. Bazzan, Franziska Klügl, 2014-05-01 Urban mobility is not only one of the pillars of modern economic systems but also a key issue in the quest for equality of opportunity once it can improve access to other services Currently however there are a number of negative issues related to traffic especially in mega cities such as economical issues cost of opportunity caused by delays environmental externalities related to emissions of pollutants and social traffic accidents Solutions to these issues are more and more closely tied to information and communication technology Indeed a search in the technical literature using

the keyword urban traffic to filter out articles on data network traffic retrieved the following number of articles as of December 3 2013 9 443 ACM Digital Library 26 054 Scopus and 1 730 000 Google Scholar Moreover articles listed in the ACM query relate to conferences as diverse as MobiCom CHI PADS and AAMAS This means that there is a big and diverse community of computer scientists and computer engineers who tackle research that is connected to the development of intelligent traffic and transportation systems It is also possible to see that this community is growing and that research projects are getting more and more interdisciplinary To foster the cooperation among the involved communities this book aims at giving a broad introduction into the basic but relevant concepts related to transportation systems targeting researchers and practitioners from computer science and information technology In addition the second part of the book gives a panorama of some of the most exciting and newest technologies originating in computer science and computer engineering that are now being employed in projects related to car to car communication interconnected vehicles car navigation platooning crowd sensing and sensor networks among others This material will also be of interest to engineers and researchers from the traffic and transportation community

Advanced Vehicle/highway Systems and Urban Traffic Problems, 1989 Modeling and Simulation of Intelligent Transportation Systems Wael A. Altabey, Mohammad Noori, Ahmed Silik, Marco Domaneschi, Weixing Hong, 2024-10-23 As transport networks become more congested there is a growing need to adopt policies that manage demand and make full use of existing assets Advances in information technology are now such that intelligent transportation systems ITS offer real potential to meet this challenge by monitoring current conditions predicting what might happen in the future and providing the means to manage transport proactively and on an area wide basis Modeling and Simulation of Intelligent Transportation Systems provides engineers professionals and researchers an intuitive appreciation for ITS theory related sensor technologies and other practical applications including traffic management safety design optimization and sustainability Provides the theory and practical applications of Intelligent Transport Theory which will be helpful as highway construction recedes as a sustainable long term solution Includes several case studies that illustrate the concepts presented throughout *Big Data Transportation Systems* Guanghui Zhao, Gusheng Zhu, 2021-07-02 This book is designed as a popular science book on big data analytics in intelligent transportation systems It aims to provide an introduction to big data transportation starting from an overview on the development of big data transportation in various countries This is followed by a discussion on the blueprint strategies of big data transportation which include innovative models planning transportation logistics and application case studies Finally the book discusses applications of big data transportation platforms **Traffic Data Collection and its Standardization** Jaume Barceló, Masao Kuwahara, 2010-06-21 A nice night of October 2007 in Beijing during the XV World Conference on ITS a number of colleagues met informally for a dinner party that spontaneously became a vivid discussion on the importance of traffic data for all types of purposes Researchers can hardly do any progress in modeling developing and testing theories

without suitable data and what practitioners can do in real life is limited not only by technology but also by the availability of the required data. Quite frequently the data and not the technologies are what determine how far we can go. Any discussion about traffic data leads in a natural way to a discussion on the variety of traffic data sources, formats, levels of aggregation, accuracies, and so on. Consequently we moved to talk on the initiative that Kuwahara had undertaken in his traffic laboratory at the University of Tokyo known as the International Traffic Data Base and thus smoothly but inexorably we came to agree that it would be convenient to organize a workshop to continue our discussion at a more formal level, share our points of view with other colleagues, listen what they had to say and if possible disseminate the findings in our professional and academic communities. *Traffic Management and Control in Intelligent Vehicle Highway Systems* Lakshmi Dhevi Baskar, 2009
