New Cell Differentiation Research Topics Hitoshi Saitama,2007 This new book presents research developments from around the globe in the field of cellular differentiation which is a concept from developmental biology describing the process by which cells acquire a type The morphology of a cell may change dramatically during differentiation but the genetic material remains the same with few exceptions A cell that is able to differentiate into many cell types is known as pluripotent These cells are called stem cells in animals and meristematic cells in higher plants A cell that is able to differentiate into all cell types is known as totipotent In mammals only the zygote and early embryonic cells are totipotent while in plants many differentiated cells can become totipotent with simple laboratory techniques
