Handbook of Biocide and Preservative Use H.W. Rossmoore, 2012-12-06 My professional interest in antimicrobial agents and contamination control goes back 50 years to my tour as a microbiologist in a field hospital in Europe during World War II With no experience and relying solely on a military handbook I prepared thermometer trays with jars of blue bichloride of mercury and pink isopropyl alcohol A preliminary typhoid diagnosis of one of our cooks resulted in the need for lab testing His stool specimen and its subsequent disposal was my problem My handbook said bum it

So burn it I did in a five gallon can with gasoline. Flames shot up almost six feet and my next mistake was to extinguish them with carbon tetrachloride. This resulted in the production of lethal phosgene gas. The hospital had a near disaster. I could say that at that moment I vowed to write a how to book so that such stupidities could be avoided. Nevertheless when I was offered the opportunity to edit this book I thought back on the need for a real practical treatment of my subject. This book then is a practical handbook for technical service personnel and scientists who are not necessarily specialists in microbiology. It provides information on suitable antimicrobial agents appropriate to their particular problem solving needs and information on the microbial groups contributing to the specific problem, their ecologies and strategies for controlling their access to the area or material of interest.

Handbook of Antioxidants for Food Preservation Fereidoon

Shahidi, 2015-02-25 Lipid oxidation in food leads to rancidity which compromises the sensory properties of food and makes it unappealing to consumers. The growing trend towards natural additives and preservatives means that new antioxidants are emerging for use in foods. This book provides an overview of the food antioxidants currently available and their applications in different food products. Part one provides background information on a comprehensive list of the main natural and synthetic antioxidants used in food. Part two looks at methodologies for using antioxidants in food focusing on the efficacy of antioxidants. Part three covers the main food commodities in which antioxidants are used. Reviews the various types of antioxidants used in food preservation including chapters on tea extracts, natural plant extracts and synthetic phenolics. Analyses the performance of antioxidants in different food systems. Compiles significant international research and advancements.

Wood preservatives are generally grouped into two categories: preservatives used for in place field remedial treatment and preservatives used for pressure treatments. A limitation of in place treatments is that they cannot be forced deeply into the wood under pressure. However, they can be applied into the center of large wooden members via treatment holes. These preservatives may be available as liquids, rods or pastes. Pressure treated wood has much deeper and more uniform preservative penetration than wood treated with other methods. The type of pressure treated wood is often dependent on the requirements of the specific application. To guide selection of pressure treated wood, the American Wood Protection Association developed Use Category System standards. Other preservative characteristics such as color, odor and surface oiliness may also be relevant. Guidelines for selection and application of field treatments and for selection and specification of pressure treated wood are provided in this document.
