Workshop On Photon-photon Collisions D O Caldwell, Hans P Paar, 1992-12-31 The proceedings blend current and future two photon physics Developments since the last Photon Photon Workshop four years ago are summarized and the future of the field is projected not only at existing accelerators but also at heavy ion colliders B factories and especially linear colliders with back scattered laser beams

Photon-photon Collisions at the Next Linear Collider, 1993 The collisions of photons at a high energy electron positron collider provide a comprehensive laboratory for testing QCD electroweak interactions and extensions of the standard model It is expected that by using back scattered laser beams that the effective luminosity and energy of photon photon collisions will be comparable to that of the primary ee collisions In this talk I will focus on tests of electroweak theory in photon photon annihilation such as $\gamma\gamma \rightarrow W^+W^-$, $\gamma\gamma \rightarrow 2\text{ Higgs}$ boson and higher order loop processes such as $\gamma\gamma \rightarrow \gamma\gamma Z$, $\gamma\gamma \rightarrow Z\gamma$ and ZZ Since each photon can be resolved into a W^+W^- pair high energy photon photon collisions can also provide a remarkable background free laboratory for studying WW collisions and annihilation I also review high energy gamma gamma tests of quantum chromodynamics such as the scaling of the photon structure function t bar t production mini jet processes and diffractive reactions

Physics at the Highest Energy and Luminosity Antonino Zichichi, 2013-03-07 During July 1991 a group of 99 physicists from 57 laboratories in 27 countries met in Erice for the 29th Course of the International School of Subnuclear Physics The countries represented were Algeria Argentina Austria Brazil Canada China France Germany Greece India Ireland Israel Italy New Zealand Norway Pakistan Poland Portugal Rumania Spain Sweden Switzerland Thailand Turkey The Union of Soviet Socialist Republics the United Kingdom and the United States of America The School was sponsored by the European Physical Society EPS the Italian Ministry of Education MPI the Italian Ministry of University and Scientific Research the Sicilian Regional Government ERS and the Weizmann Institute of Science The opening lecture of the School was given by Professor Lev Okun A few remarks are in order In the pre Gorbachev era Professor Okun's case was the most difficult in spite of many invitations he was not allowed to come and lecture at Erice Nowadays the hard times have nearly been forgotten It is with pleasure that I recall here a discussion I had with my friend Lev Okun in my house during one of his rare visits to CERN The after dinner topic was Galileo Galilei and his great discovery i e the equality between gravitational and inertial masses a discovery that we are celebrating now four hundred years later Here is a synthesis of Professor Okun's position given a massive particle the only quantity we should consider when talking about masses

Marciano,2003 This book constitutes the proceedings of a workshop which originated from a discussion with Professor A Zichichi in March 2001 The purpose of the meeting was to celebrate two developments at Brookhaven that in both cases are the outcome of more than a decade of preparation the new muon $g - 2$ measurement and the flood of data that started pouring out of RHIC Bringing together people from these very different fields was an interesting challenge But at the time when a small community of heavy ion physicists was beginning to define a program of electromagnetic interactions at RHIC and LHC it seemed logical The result is the white paper OC Hot Topics in Ultra peripheral CollisionsOCO On Fermi s centennial his original paper developing for the first time the equivalent photon approximation seemed to merit renewed attention The paper has been translated into English from the Italian and included in the proceedings Reviews Of Accelerator Science And Technology - Volume 7: Colliders Alexander Wu Chao,Weiren Chou,2015-02-11 The idea of colliding two particle beams to fully exploit the energy of accelerated particles was first proposed by Rolf Wider e who in 1943 applied for a patent on the collider concept and was awarded the patent in 1953 The first three colliders AdA in Italy CBX in the US and VEP 1 in the then Soviet Union came to operation about 50 years ago in the mid 1960s A number of other colliders followed Over the past decades colliders defined the energy frontier in particle physics Different types of colliders proton proton proton antiproton electron positron electron proton electron ion and ion ion colliders have played complementary roles in fully mapping out the constituents and forces in the Standard Model SM We are now at a point where all predicted SM constituents of matter and forces have been found and all the latest ones were found at colliders Colliders also play a critical role in advancing beam physics accelerator research and technology development It is timely that RAST Volume 7 is dedicated to Colliders
