on Deterring Cyberattacks National Research Council, Policy and Global Affairs, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Deterring Cyberattacks: Informing Strategies and Developing Options for U.S. Policy, 2010-10-30 In a world of increasing dependence on information technology the prevention of cyberattacks on a nation's important computer and communications systems and networks is a problem that looms large. Given the demonstrated limitations of passive cybersecurity defense measures it is natural to consider the possibility that deterrence might play a useful role in preventing cyberattacks against the United States and its vital interests. At the request of the Office of the Director of National Intelligence the National Research Council undertook a two phase project aimed to foster a broad multidisciplinary examination of strategies for deterring cyberattacks on the United States and of the possible utility of these strategies for the U.S. government. The first phase produced a letter report providing basic information needed to understand the nature of the problem and to articulate important questions that can drive research regarding ways of more effectively preventing discouraging and inhibiting hostile activity against important U.S. information systems and networks. The second phase of the project entailed selecting appropriate experts to write papers on questions raised in the letter report. A number of experts identified by the committee were commissioned to write these papers under contract with the National Academy of Sciences. Commissioned papers were discussed at a public workshop held June 10-11, 2010 in Washington, D.C. and authors revised their papers after the workshop. Although the authors were selected and the papers reviewed and discussed by the committee the individually authored papers do not reflect consensus views of the committee and the reader should view these papers as offering points of departure that can stimulate further work on the topics discussed. The papers presented in this volume are published essentially as received from the authors with some proofreading corrections made as limited time allowed.

Versatile Routing and Services with BGP Alcatel-Lucent, Colin Bookham, 2014-01-29 Design a robust BGP control plane within a secure scalable network for smoother services A robust Border Gateway Protocol setup is vital to ensuring reliable connectivity an essential capability for any organization The Internet has become a necessary always on service in homes and businesses and BGP is the protocol that keeps communication flowing But BGP also has become crucial to delivery of intra domain business services But the network is only as reliable as BGP so service enablement depends upon making BGP more stable reliable and service rich Alcatel Lucent Service Router Operating System is engineered to bear the load of the most demanding networks The system features support for Symmetric Multiprocessing and unprecedented depth of advanced routing features all within a single OS that s supported across the entire Alcatel Lucent IP MPLS router portfolio Versatile Routing and Services with BGP provides guidance toward implementation of BGP within SR OS and details the use and control of each feature The book provides in depth coverage of topics such as BGP MPLS IP VPN VPLS VPWS Labeled Unicast IPv4

reconvergence and multicast Security graceful restart and error handling IPv6 PE 6PE and IPv6 extensions to BGP MPLS IP VPN A look at forthcoming features such as Ethernet VPN Basic BGP competency is assumed but the book is accessible even to those with zero familiarity with Alcatel Lucent's SR OS It underscores the idea that BGP is more than just service enablement and can also be used for infrastructure layer transport but both layers must be solid scalable and able to quickly reconverge Versatile Routing and Services with BGP demonstrates the creation of a robust BGP control plane within a secure network allowing the delivery of flawless uninterrupted service

BGP Iljitsch van Beijnum, 2002-09-11 Border Gateway Protocol BGP is the routing protocol used to exchange routing information across the Internet It makes it possible for ISPs to connect to each other and for end users to connect to more than one ISP BGP is the only protocol that is designed to deal with a network of the Internet's size and the only protocol that can deal well with having multiple connections to unrelated routing domains This book is a guide to all aspects of BGP the protocol its configuration and operation in an Internet environment and how to troubleshooting it The book also describes how to secure BGP and how BGP can be used as a tool in combating Distributed Denial of Service DDoS attacks Although the examples throughout this book are for Cisco routers the techniques discussed can be applied to any BGP capable router The topics include Requesting an AS number and IP addresses Route filtering by remote ISPs and how to avoid this Configuring the initial BGP setup Balancing the available incoming or outgoing traffic over the available connections Securing and troubleshooting BGP BGP in larger networks interaction with internal routing protocols scalability issues BGP in Internet Service Provider networks The book is filled with numerous configuration examples with more complex case studies at the end of the book to strengthen your understanding BGP is for anyone interested in creating reliable connectivity to the Internet

Big Book of Border Gateway Protocol (BGP) RFCs, 2000 This work looks at Border Gateway Protocol and shows how it defines how backbone routing i.e. routing on a line carrying data gathered from smaller lines is carried out on the Internet or large intranets extranets BGP differs from its alternatives in that it is an industrial strength routing protocol suitable for use in high bandwidth backbone environments Soon all non local internet traffic will be routed via BGP and as intranets extranets become more complete BGP should become even more in the corporate environment
