Algorithm Design: A Methodological Approach - 150 problems and detailed solutions Patrick Bosc, Marc Guyomard, Laurent Miclet, 2023-01-31 A bestseller in its French edition this book is original in its construction and its success in the French market demonstrates its appeal It is based on three principles 1 An organization of the chapters by families of algorithms exhaustive search divide and conquer etc On the contrary there is no chapter devoted only to a systematic exposure of say algorithms on strings Some of these will be found in different chapters 2 For each family of algorithms an introduction is given to the mathematical principles and the issues of a rigorous design with one or two pedagogical examples 3 For the most part the book details 150 problems spanning seven families of algorithms For each problem a precise and progressive statement is given More importantly a complete solution is detailed with respect to the design principles that have been presented often some classical errors are pointed out Roughly speaking two thirds of the book is devoted to the detailed rational construction of the solutions

Hilbert Space Splittings and Iterative Methods Michael Griebel, Peter Oswald, 2024-11-06 This book is about the theory of so called Schwarz methods for solving variational problems in a Hilbert space V arising from linear equations and their associated quadratic minimization problems Schwarz methods are based on the construction of a sequence of approximate solutions by solving auxiliary variational problems on a set of smaller finite dimensional Hilbert spaces V_i in a certain order combining them and using the combined approximations in an iterative procedure The spaces V_i form a so called space splitting for V they need not necessarily be subspaces of V and their number can be finite or infinite The convergence behavior of Schwarz methods is influenced by certain properties of the space splittings they are based on These properties are identified and a detailed treatment of traditional deterministic and more recent greedy and stochastic orderings in the subproblem solution process is given together with an investigation of accelerated methods To illustrate the abstract theory the numerical linear algebra analogs of the iterative methods covered in the book are discussed Its standard application to the convergence theory of multilevel and domain decomposition methods for solving PDE problems is explained and links to optimization theory and online learning algorithms are given Providing an introduction and overview of iterative methods which are based on problem decompositions and suitable for parallel and distributed

computing the book could serve as the basis for a one or two semester course for M S and Ph D students specializing in numerical analysis and scientific computing It will also appeal to a wide range of researchers interested in scientific computing in the broadest sense

Global Optimization and Constraint Satisfaction Christophe Jermann, Arnold Neumaier, Djamil Sam, 2005-05-10 The formulation of many practical problems naturally involves constraints on the variables entering the mathematical model of a real life situation to be analyzed It is of great interest to find the possible scenarios satisfying all constraints and if there are many of them either to find the best solution or to obtain a compact explicit representation of the whole feasible set The 2nd Workshop on Global Constrained Optimization and Constraint Satisfaction COCOS 2003 which took place during November 18-21 2003 in Lusanne Switzerland was dedicated to theoretical algorithmic and application oriented advances in answering these questions Here global optimization refers to finding the absolutely best feasible point while constraint satisfaction refers to finding all possible feasible points As in COCOS 2002 the first such workshop see the proceedings 1 the emphasis was on complete solving techniques for problems involving continuous variables that provide all solutions with full rigor and on applications which however were allowed to have relaxed standards of rigor The participants used the opportunity to meet experts from global optimization mathematical programming constraint programming and applications and to present and discuss ongoing work and new directions in the field Four invited lectures and 20 contributed talks were presented at the workshop The invited lectures were given by John Hooker Logic Based Methods for Global Optimization Jean Pierre Merlet Usual and Unusual Applications of Interval Analysis Hermann Schichl The COCONUT Optimization Environment and Jorge Moré Global Optimization Computational Servers This volume contains the text of Hooker's invited lecture and of 12 contributed talks Copies of the slides for most presentations can be found at 2
