Foundations of Algorithms Richard E. Neapolitan, Kumarss Naimipour, 2011 Data Structures Theory of Computation
Computational Counterpoint Worlds Octavio Alberto Agustín-Aquino, Julien Junod, Guerino Mazzola, 2015-07-08 The mathematical theory of counterpoint was originally aimed at simulating the composition rules described in Johann Joseph Fux's *Gradus ad Parnassum*. It soon became apparent that the algebraic apparatus used in this model could also serve to define entirely new systems of rules for composition generated by new choices of consonances and dissonances which in turn lead to new restrictions governing the succession of intervals. This is the first book bringing together recent developments and perspectives on mathematical counterpoint theory in detail. The authors include recent theoretical results on counterpoint worlds, the extension of counterpoint to microtonal pitch systems, the singular homology of counterpoint models and the software implementation of contrapuntal models. The book is suitable for graduates and researchers. A good command of algebra is a prerequisite for understanding the construction of the model.

Regression and Machine Learning for Education Sciences Using R Cody Dingsen, 2024-11-01 This book provides a conceptual introduction to regression analysis and machine learning and their applications in education research It discusses their diverse applications including its role in predicting future events based on the current data or explaining why some phenomena occur These identified important predictors provide data based evidence for educational and psychological decision making Offering an applications oriented approach while mapping out fundamental methodological developments

this book lays a sound foundation for understanding essential regression and machine learning concepts for data analytics. The first part of the book discusses regression analysis and provides a sturdy foundation to understand the logic of machine learning. With each chapter the discussion and development of each statistical concept and data analytical technique is presented from an applied perspective with the statistical results providing insights into decisions and solutions to problems using R. Based on practical examples and written in a concise and accessible style, the book is learner centric and does a remarkable job in breaking down complex concepts. Regression and Machine Learning for Education Sciences Using R is primarily for students or practitioners in education and psychology, although individuals from other related disciplines can also find the book beneficial. The dataset and examples used in the book are from an educational setting and students will find that this text provides a good preparation ground for studying more statistical and data analytical materials.

Foundations of Algorithms Richard E. Neapolitan, Kumarss Naimipour, 1998. Rational Decisions in Organisations Frédéric Adam, Dorota Kuchta, Stanisław Stanek, 2022-05-30. Managers in organisations must make rational decisions. Rational decision making is the opposite of intuitive decision making. It is a strict procedure utilising objective knowledge and logic. It involves identifying the problem to solve, gathering facts, identifying options and outcomes, analysing them, considering all the relationships and selecting the decision. Rational decision making requires support methods and software tools. The identification of the problem to solve needs methods that would measure and evaluate the current situation. Identification and evaluation of options and analysis of the available possibilities involves analysis and optimisation methods. Incorporating intuition into rational decision making needs adequate methods that would translate ideas or observed behaviours into hard data. Communication, observation and opinions recording is hardly possible today without adequate software. Information and data that form the input, intermediate variables and the output must be stored, managed and made accessible in a user friendly manner. Rational Decisions in Organisations: Theoretical and Practical Aspects presents selected recent developments in the support of the widely understood rational decision making in organisations, illustrated through case studies. The book shows not only the variety of perspectives involved in decision making but also the variety of domains where rational decision support systems are needed. The case studies present decision making by medical doctors, students and managers of various universities, IT project teams, construction companies, banks and small and large manufacturing companies. Covering the richness of relationships in which the decisions should and must be

taken the book illustrates how modern organisations operate in chains and networks they have multiple responsibilities including social legal business and ethical duties Nowadays managers in organisations can make transparent decisions and consider a multitude of stakeholders and their diverse features incorporating diverse criteria using multiple types and drivers of information and decision making patterns and referring to numerous lessons learned As the book makes clear the marriage of theoretical ideas with the possibilities offered by technology can make the decisions in organisations more rational and at the same time more human
