In Monetary Economics After 'Rethinking' John Smithin, 2022-04-21 The conventional macroeconomic theory of the late twentieth and early twenty first century based on the assumption that the working of complex monetary economy could be analysed on the same principles as those of barter exchange has demonstrably failed This book provides a thorough rethinking of the nature of a monetary economy It builds upon a complete theory of the domestic and international monetary macro economy and of macroeconomic policy for the modern age Central to the analysis is the idea that a successful market economy requires an endogenous supply of money via the banking system Therefore to achieve macroeconomic stability the book proposes the targeting of real interest rates under a regime of flexible exchange rates or fixed but adjustable exchange rates as the main goal of monetary policy along with a range of innovative fiscal and trade policies to promote economic growth and thereby achieve full employment and a fair distribution of income Microeconomics R. How Substitutable is Natural Capital? Anil Markandya, Suzette Pedroso-Galinato, One of the recurring themes in the sustainability literature has been the legitimacy of using an economic framework to account for natural resources This paper examines the potential for substituting between different inputs in the generation of income where the inputs include natural resources such as land and energy resources A nested constant elasticity of substitution CES production function is used to allow flexibility in the estimated elasticities of substitution Also with this specification natural resources and other inputs are combined in different levels of the function thus allowing for different levels of substitutability Institutional and economic indicators are also incorporated in the production function estimated Results show that the elasticities derived from functions involving land resources were generally around one or greater implying a fairly high degree of substitutability Furthermore changes in trade openness and private sector investment have a statistically significant and direct relationship with income generation No statistically significant relationship between income and any of the institutional indicators was found
